# ABOUT ACES

## ACES Highlights: A Year of Code, Creativity & Innovation

The academic year began on a festive note with **Udbhav**, an online photography and reel competition celebrating the spirit of Ganpati through categories like Decoration, Prasad, Miravnuk, and Costume. This was followed by the ACES Inauguration 2025–26, where the new committee was introduced, bringing fresh energy and vision, along with the launch of a brand-new website.

In October, ACES conducted **Hacktoberfest**, an online session introducing students to open-source contributions, along with a beginner-friendly walkthrough of Git and GitHub. The same month featured **Genesis 2026**, the annual flagship technical fest, offering sessions on trending technologies, resume building, research, placements, and networking.

The new year kicked off with **Code Mode**, an online DSA contest that tested participants on time-bound problem-solving skills. In February, ACES organized a **Blood Donation Camp**, promoting social responsibility, along with free eye check-ups for students.

The year concluded with large-scale events like **Ignition Hackverse 2026**, a 24-hour national-level hackathon held on 3rd and 4th April, featuring a prize pool of ₹1,80,000 along with meals, accommodation, and mentorship. The final event, **Algorythm**, brought a Minecraft-themed twist with engaging activities like Geoguessr, Treasure Hunt, Blind Coding, and Dog'n Bone, making it a memorable end to the year.

# ABOUT DEPARTMENT

## Department of Computer Engineering

Computer Engineering Department was established in the year 2002 with undergraduate course. The Department has sanctioned intake of 120 students. The department has qualified, experienced and dedicated teaching staff all having PG qualification. Department is well equipped with fully developed laboratories with equipment having internet facility in each laboratory as per the requirements of SPPU and AICTE. Department emphasizes on effective teaching learning process with excellent teaching learning environment. The department has good association with eminent persons from both industry and academics.

**The department is accredited by NBA in 2025 for 3 years.**

### Program Educational Objectives:

The Graduates of Computer engineering after passing out should

- **PEO1** – Apply knowledge in Computer Engineering for solving real world problems leading to responsible and competent professionals.
- **PEO2** – Demonstrate behavioral aspects for research, and higher studies in the field of Computer Engineering
- **PEO3** – Demonstrate ethical practices, societal contributions through communities and life-long learning.

### Vision

- To achieve excellence by imparting quality education and competency skills in Computer Engineering.

### Mission

- To impart knowledge through learner-centric teaching learning process to cater the needs of industry and higher education.
- To inculcate good human values, leadership skills and ethics with holistic development.
- To develop research culture and professional competencies in the field of Computer Engineering making a positive impact on society.

# Department of Computer Engineering

## Program Outcomes:

**PO1:** Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop the solution of complex engineering problems.

**PO2:** Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

**PO3:** Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

**PO4:** Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

**PO5:** Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

**PO6:** The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

**PO7:** Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

**PO8:** Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

**PO9:** Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

**PO10:** Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

**PO11:** Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

## Program Specific Outcomes:

A graduate of the Computer Engineering Program will demonstrate:

- **PSO1:** The ability to work in the domains related to artificial intelligence, machine learning and cyber security for efficient solutions.
- **PSO2:** The ability to apply standard practices and strategies in software project design and development to deliver a quality product.
- **PSO3:** The ability to build successful career in computer engineering and have a zest for higher studies.

# ABOUT COLLEGE

## College History

Vidyarthi Griha was established in 1909 by a group of dedicated and visionary social workers with the primary aim of providing educational facilities to deserving and underprivileged students.

PVG's College of Engineering, Technology and Management was established as an unaided college in 1985 under the parent institute PVG. PVGCOET is affiliated with Savitribai Phule Pune University and is approved by AICTE (All India Council for Technical Education) and the Government of Maharashtra.

The parent institute, Pune Vidyarthi Griha—formerly known as Pune Anath Vidyarthi Griha—is a well-known charitable institution in Maharashtra, established in 1909 by a group of dedicated and visionary educationists.

The primary mission of the institute is to provide progressive and value-added educational facilities for the deserving and underprivileged students of society. Today, the institution has grown into a big banyan tree, with its branches spread across Pune, Mumbai, and Nashik.

The institute conducts a wide spectrum of educational programs, from pre-primary to higher education, in professional fields like Engineering, Technology, Management, Computer Science, Commerce, Science, etc.

Pune Vidyarthi Griha governs various institutions in Pune. Through these institutions, it offers facilities ranging from Junior KG to university-level professional courses for deserving students.

Pune Vidyarthi Griha is the only institute in India that has made significant efforts to promote professional education in the printing field since 1926. It took the lead in establishing degree and diploma programs in Printing Engineering and Communication Technology, approved by AICTE.

The institute also runs hostels for destitute boys and girls in Pune, and an Old Age Home (Shatayu Bhavan) in Pune.

PVG has a modern printing press and a publications division. It primarily publishes technical books that are well-recognized and widely used.

## Institution Memberships

- PVGCOET&M is a member of the Automotive Research Association of India (ARAI) Knowledge Centre (Library), Pune
- PVGCOET&M is a member of the British Library (Pune)
- PVGCOET&M is a member of the Mahratta Chamber of Commerce, Industries and Agriculture
- PVGCOET&M is a member of the Flexography Technical Association (FTA)
- PVGCOET&M is a member of the Graphic Arts Technical Foundation (GATF), USA

The college has attained autonomous status in the academic year 2025-26

## Clubs in College

### ACES

The Association of Computer Engineering Students (ACES) is a student-driven club at PVG's College of Engineering and Technology, Pune. It organizes technical events, workshops, and activities for Computer Engineering students to enhance their skills and stay updated with industry trends. ACES promotes innovation, teamwork, and professional development through hands-on learning and community engagement.

### ITSA

The Information Technology Students' Association (ITSA) is a student-driven club that organizes technical events, workshops, and activities for IT students to enhance their skills and industry knowledge. It fosters innovation, collaboration, and professional growth.

### TESA

The Telecommunication Engineering Students' Association (TESA) is a student-led club that conducts workshops, seminars, and technical events for Electronics and Telecommunication students to strengthen their practical knowledge and skills. It emphasizes innovation, teamwork, and industry readiness.

### MESA

The Mechanical Engineering Students' Association (MESA) hosts workshops, competitions, and events to build practical skills among Mechanical Engineering students. It encourages creativity, teamwork, and career-oriented development.

### AIDEAS

The Artificial Intelligence and Data Science Students' Association (AIDEAS) is a vibrant club that organizes sessions and events focused on AI, machine learning, and data science. It helps students stay ahead of tech trends through learning and collaboration.

### PRINTERA

The Printing Engineering Students' Association (PRINTERA) supports skill development through technical sessions, workshops, and industry interactions. It focuses on both technical and creative aspects of printing engineering.

**EESA**

The Electrical Engineering Students' Association (EESA) hosts workshops by industry experts, competitions, and events to build practical skills among Electrical Engineering students. It encourages teamwork, and career-oriented development.

**EDC**

The Entrepreneurship Development Cell (EDC) nurtures entrepreneurial spirit through seminars, startup talks, and innovation events. It supports students in transforming ideas into impactful ventures.

**PVG ACM**

The PVG ACM Student Chapter promotes computing knowledge through coding competitions, tech talks, and workshops. It helps build a strong foundation in computer science and prepares students for tech careers.

**PVG Art Circle**

This club nurtures artistic talent through drawing, painting, sketching, and installations. It participates in intercollegiate competitions such as Firodiya and Purushottam Karandak, promoting creativity and cultural expression.

**PVG Samsara**

Samsara is the college's annual cultural festival. It features dance, drama, music, fashion shows, and literary events, fostering unity and inclusivity among students.

**PVGCOET IIC**

The Institution's Innovation Council (IIC) fosters innovation and entrepreneurship through hackathons, ideation workshops, and startup sessions, enhancing students' problem-solving and design thinking abilities.

**TEDxPVGCOET**

An independently organized TED event that brings together inspiring speakers to spark curiosity, learning, and meaningful conversations among students.

**GDSC PVGCOET**

The Google Developer Student Club conducts hands-on sessions in web development, machine learning, cloud computing, and Android development. It fosters collaboration and skill-building among aspiring developers.

**PVG Robotics Club**

The Robotics Club features a dedicated lab with a KUKA robot and hosts workshops, competitions, and hands-on projects related to robotics, control systems, and AI.

**PVGCOET Sports**

This club promotes physical well-being and team spirit through various sports like cricket, football, volleyball, and athletics. It organizes both inter- and intra-college tournaments and fitness events.

**Music Club**

A platform for students to express their talents in vocal and instrumental music. The club actively participates in college events and fosters harmony and self-expression through music.

**Drone Club**

The college consists of two drone clubs: DAUSS & SQUADRONE. The club actively participates in competitions and are innovating in the aerial vehicle industry.

# TECH STARTUP

## PIXXEL

Space technology is no longer limited to government agencies and billion-dollar missions. Around the world, private startups are entering the space sector with bold ideas, transforming how humanity observes and understands the planet. In India, one company leading this revolution is Pixxel.

Founded in 2019, Pixxel has quickly gained recognition as one of India's most innovative startups. The company focuses on building a network of hyperspectral imaging satellites capable of capturing highly detailed data from space. While ordinary satellite images show what the human eye can see, Pixxel's technology goes much further—revealing information invisible to standard cameras. This can help industries, governments, and researchers make smarter decisions about Earth's resources and environment.

Pixxel was founded by Awais Ahmed and Kshitij Khandelwal, two young entrepreneurs who believed India could play a larger role in the private space economy. Their vision was to create affordable and advanced Earth-observation technology that could compete globally.

What makes Pixxel unique is its focus on hyperspectral imaging. Traditional satellites capture images in only a few color bands, but Pixxel's satellites collect data across hundreds of spectral bands. This allows them to identify materials, vegetation health, water quality, minerals, and atmospheric changes with exceptional precision.

In simple terms, Pixxel's satellites do not just take pictures—they analyze the hidden signatures of objects and landscapes. This creates opportunities for industries that need accurate environmental and operational insights

### Applications with Real Impact

Pixxel's technology can be used across multiple sectors:

- **Agriculture:** Monitoring crop health, soil conditions, and irrigation needs
- **Climate Science:** Tracking methane leaks, deforestation, and environmental changes
- **Mining & Energy:** Identifying resources and monitoring land use
- **Disaster Management:** Assessing floods, fires, and damaged regions quickly
- **Urban Planning:** Supporting smarter infrastructure development

By turning space data into useful intelligence, Pixxel is helping solve challenges on Earth

Despite being a young startup, Pixxel has attracted strong international attention. It has raised funding from notable investors and partnered with leading organizations in the global space ecosystem. The company has also launched satellites, proving its ability to convert ambition into real missions.

Its rise reflects growing confidence in India's private space sector, especially after regulatory changes encouraged startup participation.

Pixxel represents a new era of Indian entrepreneurship—one where startups are not limited to apps or online services, but are entering frontier technologies such as aerospace, AI, and climate intelligence. It shows that Indian founders can build globally relevant companies tackling planetary-scale issues.

As more satellites enter orbit and demand for Earth intelligence rises, Pixxel could become one of the most important names in the future of space data.

~ Devashree Deshpande

## Krutrim: Powering India's AI Revolution

In a world increasingly driven by Artificial Intelligence, countries across the globe are racing to build powerful AI systems that can shape the future. Amid this transformation, India has stepped forward with its own bold initiative—Krutrim. Founded in 2023, Krutrim is more than just a startup; it is a vision to create an AI ecosystem designed specifically for India.

With a focus on accessibility, scalability, and local relevance, Krutrim aims to bridge the gap between advanced technology and everyday users—making AI not just powerful, but practical.

At the heart of Krutrim is Bhavish Aggarwal, the founder of Ola. Known for transforming India's mobility sector, Aggarwal has now set his sights on something even more impactful - Artificial Intelligence.

### A Unique and Integrated Approach

Krutrim distinguishes itself by building a complete AI ecosystem rather than focusing on a single product. Its core offerings include:

- **AI Cloud Infrastructure:** Providing scalable computing power
- **Foundational Models:** Advanced AI systems capable of understanding and generating human-like responses
- **AI Applications:** Tools designed for businesses and everyday users
- **Language Support:** Focus on Indian languages to improve accessibility

This all-in-one model allows Krutrim to cater to developers, startups, and enterprises alike.

### Soaring Growth and Recognition

Krutrim's journey, though recent, has been impressive:

- **Unicorn Status:** Achieved a valuation of \$1 billion shortly after its launch
- **Funding Success:** Raised \$74.9 million from investors like Z47 and Sarin Family India
- **Tech Hub Presence:** Headquartered in Bengaluru, India's innovation capital

These milestones highlight the strong belief investors have in India's AI future.

Krutrim's rapid development has been supported by strong financial backing. With nearly \$74.9 million in funding, the company is well-positioned to invest in research, infrastructure, and talent.

This support enables Krutrim to compete with global AI companies while maintaining its focus on India-first solutions.

## Expanding Horizons: Innovations and Capabilities

Krutrim is continuously evolving its platform to meet growing demands. Some of its key innovations include:

- AI solutions designed specifically for Indian users and businesses
- Support for regional languages, making AI inclusive
- Focus on secure and private data handling
- Tools for developers to easily build and deploy AI applications
- Scalable systems suitable for industries like finance, healthcare, and education

Through these innovations, Krutrim is not just building technology—it is building opportunities.

## Facing the Heat: Challenges and Competition

Despite its promising growth, Krutrim faces several challenges:

- Intense competition from global AI leaders
- High costs associated with AI research and infrastructure
- Need for continuous innovation and updates
- Concerns around ethical AI and data privacy

To address these, the company is focusing on long-term sustainability, strategic partnerships, and continuous improvement.

## A New Chapter in India's Tech Story

Krutrim is more than just a startup—it is a symbol of India's growing technological confidence. By focusing on local needs while aiming for global standards, it is redefining how AI can be built and used.

As it continues to grow, Krutrim has the potential to place India firmly on the global AI map—proving that innovation, when combined with vision, can truly transform the future.

## Did You Know?

- Krutrim became one of India's fastest AI unicorns within a year of its launch
- It focuses heavily on Indian language AI, unlike many global platforms

The name "Krutrim" means "Artificial" in Sanskrit, reflecting its AI roots

~ Rahul Gawade

# TECH BLOGS

## THE FUTURE IS TANGIBLE: THE RISE OF PHYSICAL AI

For the last decade, our relationship with technology has been two-dimensional. We stared at glass rectangles, typed on plastic keys, and interacted with "intelligence" that lived exclusively in the cloud. But as we move through 2026, the digital veil is lifting.

We are witnessing one of the biggest engineering leaps since the Industrial Revolution: Physical AI. Unlike the generative AI of 2024 that wrote poems and created images, Physical AI has a "body." Using advanced sensors and Neuromorphic Computing—chips inspired by the human nervous system—it can sense, respond to, and interact with the real world. This is technology you can finally shake hands with.

### The Three Pillars of the Physical Revolution

1. Sensory Intelligence (The Five Senses) Modern machines are no longer "blind." Using LiDAR (Light Detection and Ranging) and haptic skin sensors, robots can now feel the difference between a delicate strawberry and a heavy wrench.

2. Edge Computing: The "Local" Brain - one of the biggest hurdles for tech was the "delay" caused by sending data to a server and back. Today, Physical AI processes information "at the edge" - right inside the device. This allows for split-second decision-making, which is essential for the safety of autonomous community shuttles and sidewalk delivery bots navigating our busy streets.

3. Sustainability through Bio-Materials - The "Silicon" era is evolving. 2026's latest tech features Soft Robotics, using biodegradable polymers and muscles powered by salt-water batteries. These machines are quieter, safer to be around, and far more environmentally friendly than the clunky metal robots of the past.

## A Day in the Life: 2026 and Beyond

Imagine waking up and your home has already adjusted the climate based on your sleep quality. As you head out, a community "Maintenance Bot" is repairing a small crack in the sidewalk using **Self-Healing Concrete**—a tech that uses bacteria to "grow" new stone.

In the local library, a Physical AI assistant doesn't just tell you where a book is; it retrieves it from a high shelf and translates the first chapter into your preferred language in real-time. This isn't science fiction; it's the quiet integration of intelligence into our physical infrastructure.

## The Ethical Frontier: Keeping it Human

With any leap forward comes responsibility. As these machines enter our parks, homes, and hospitals, our community must focus on three core values:

- **Privacy First:** Ensuring that "eyes" on a robot don't mean "data in the cloud."
- **Accessibility:** Making sure these advancements assist our seniors and those with disabilities first, rather than just being toys for the wealthy.
- **Human Touch:** Recognizing that while a robot can pour a cup of tea, it cannot replace the warmth of a neighbourly chat.

## Final Thoughts: Why 2026?

We've reached the "Physical AI" tipping point because of Neuromorphic Chips. These are processors designed to act like a brain, allowing robots to learn from their mistakes in real-time. The "Future" isn't a destination we are waiting for; it is a tool we are building together. It's time to step away from the screen and see what the future feels like.

~ Subodh Kamble

## BUILD YOUR OWN NETFLIX

Ever thought how your favourite show or movie or any other media is served to you? Of course this is an entire system design topic but let us not dive deep into details and only look at the basics. The entire infrastructure of Netflix, Amazon Prime Video, or any other OTT platform is dependent on a content-delivery-network or a CDN. CDN's are specialized networks that work together to deliver any type of media, be it songs, movies, shows or even books!

## How are we going to stream content?

Using Jellyfin, a personal media server.

## The technical part first :

How do you stream content?

Our scope is limited only to a single network. Which means anyone connected to the same Wi-Fi will be able to stream the content you provide. For serving the content across the same network we need a server that can stream the files over the network. For this purpose we are going "Jellyfin". It is a server that will serve the content across the network to any device be it your TV, Laptop, Mobile, Tablet etc.

The entirety of this setup relies on 2 key components: a Jellyfin server and a Jellyfin client. Just like web servers and web clients, the server is used to serve requests and provide content while the client is used to interact with the server and get the appropriate files/content back.

The client is the easiest part to set up. You just download the app on your mobile devices like Netflix and you're ready to go. But the trickier part is setting up the server which will actually serve the content.

## How does the server work?

Jellyfin works by sharing the files that are stored on your laptop/PC. You need to make a folder where you store all your Movies and Shows (separate folders for Movies and Shows). When you are setting up your server Jellyfin itself will ask you to specify the folders where files are stored and whether the folder stores Movies or Shows.

**Step 1** : Download the exe from here <https://repo.jellyfin.org/?path=/server/windows/latest-stable/amd64>

**Step 2** : Go through the entire setup.exe without changing the defaults. Just keep clicking “Next” and you’re good to go.

**Step 3** : Once your installation is finished, a Jellyfin Icon will appear on your taskbar. Just click on it and a web page will open up. This is the admin setup.

**Step 4** : On the admin setup you will have to set admin username and password. Once you set it remember it as the forgot password flow is tedious.

**Step 5** : After setting up the username and password Jellyfin will ask for the folders where the content is stored. Make sure you create folders at an accessible location so it's easier to set up. For everything else on the page, the default settings are fine

**Step 6** : Done! You have successfully set up your own media server. Just download the content, place it in the appropriate folders and you are ready to stream your content anywhere on the same network.

~ Aditya Kelkar

## HACK TODAY, DECRYPT TOMORROW — THE QUANTUM THREAT

Think about a normal day. You unlock your phone with a PIN or fingerprint, pay with UPI, check your bank balance, order food, send messages on WhatsApp or Instagram, and upload files to the cloud. It all feels routine and secure.

Behind the scenes, one thing protects you every second: encryption — technology that scrambles information so only the right person can read it. For decades, experts believed this protection was nearly unbreakable.

In early 2026, two major research papers changed how experts view the quantum threat. Both improved Peter Shor’s algorithm, which could break RSA and elliptic curve encryption.

The first, from Google Quantum AI, showed that breaking Bitcoin and Ethereum style encryption may need only about 1,000 logical qubits. The second, from Oratomic, estimated that 26,000 physical qubits could crack the same encryption.

### The Fix Is Already Being Built

The good news is that governments, companies, and researchers began preparing years ago. They developed Post-Quantum Cryptography (PQC) — new encryption methods designed to resist attacks from both normal and quantum computers.

In 2024, National Institute of Standards and Technology (NIST) selected the first official PQC standards. These are now being tested and gradually added to real systems. Major tech companies, messaging apps, and banks have already started shifting to these quantum-safe methods.

This global transition is like replacing locks on important digital doors before a universal master key exists. It will take years, which is why the 2029 warning matters: the time to act is now.

The real question is no longer “Will quantum computers break today’s encryption?” Most experts agree that, given enough time, they will. The real question is: “Can we build and install the new, quantum-safe locks fast enough — before the old ones fail?”

~ Pranav Diwase

## AFFECTIVE COMPUTING: THE MACHINES THAT READ YOUR EMOTIONS

Picture this: it's a Tuesday afternoon. You're sitting for an online proctored exam — the kind where your webcam is on, your screen is being recorded, and you've been told the AI is just watching for "malpractice." You're nervous, obviously.

What you don't know is that the software isn't just watching for cheating. It's reading you. Your micro-expressions. The subtle drop in your blink rate when you're confused. The slight asymmetry in your smile when you get an answer right. It's building a real-time emotional profile — and in some systems, that profile outlives the exam itself.

Welcome to the world of affective computing — the field of AI that doesn't just process your data, but attempts to understand what you feel. And here's the unsettling part: it's often better at detecting your emotions than you are at hiding them.

### Four Places Affective AI Is Already Working

- **AI Hiring Interviews** - Platforms like HireVue analyze facial cues, vocal tone, and word choice during video interviews to score candidates — without a human watching.
- **Online Proctoring** - Exam software flags "suspicious" emotional states — nervousness, confusion, or distraction — as potential indicators of dishonesty
- **Smart Cars** - Automotive AI (Affectiva's SDKs in 25+ car brands) monitors driver drowsiness, anger, and distraction through in-cabin cameras in real time.

### The Science Behind the Read

Affective systems draw from multiple data streams simultaneously. Facial Action Coding System (FACS) — originally developed by psychologist Paul Ekman — breaks the human face into 44 distinct "action units," each corresponding to specific muscle movements. AI models trained on FACS can now identify combinations of these units in real time, at 30 frames per second, even in low lighting.

But it goes deeper than faces. Voice analysis software detects micro-variations in pitch, cadence, and breath patterns that the human ear misses entirely. Galvanic skin response sensors — already found in Apple Watch and Fitbit — measure emotional arousal through sweat. And more recently, researchers at MIT have demonstrated emotion detection through Wi-Fi signals alone — by reading how your breathing and heart rate disturb radio waves in a room, without any camera or sensor touching your body. You don't need to do anything obvious to be read. You just need to be present.

### Can a Machine Ever Truly Know What You Feel?

The deepest problem with affective computing is that emotion is not the same as expression. You can smile while grieving or look calm while panicking. Human life has always included a gap between what we feel and what we show.

Affective AI reads signals and guesses emotional states, but it does not truly understand context, culture, or intention. A student looking away may be thinking. A job applicant speaking slowly may simply be choosing words carefully. When such systems make decisions, they are not measuring truth — only probability and conformity.

Researchers know these limits. Companies deploying the technology often ignore them.

## गुणदोष वाहीन आवडी

काय कमाल आहे??!

प्रत्येक झाडाचं फुल पूजेसाठी वापरलं जातं असं नाही आणि ज्या झाडाचं वापरलं जातं त्या झाडाची सगळीच फुलं वापरली जातात असंही काही नाही. प्रत्येक भक्त आपापल्या श्रद्धेप्रमाणे ते फुल वाहतो... एखादा माणूस अयोध्येतील सुबक, आखीव-रेखीव, प्रसिद्ध अशा रामाला ते फुल वाहतो तर एखादा वेशीवरच्या किंवा गावातल्या देवाला वाहतो. काही फुलं वहायला नेण्यापूर्वीच नष्ट होतात तर काही वाहन झाल्यावर लगेच कोमेजतात.. काही फुलं अगदी निर्माल्य म्हणून विसर्जित झाली तरी तशीच तजेलदार राहतात!

इथे झाड म्हणजे माणूस आहे आणि फुल म्हणजे त्याचे गुण! प्रत्येक झाडाला कळी उमलून फुल करण्याचे सामर्थ्य निसर्गतः असतेच पण तरीही काही फुल चित्र-विचित्र असतात तर काही सुबक! काहींची सुंदर वाढ होते तर काहींची खुंटे.. आता ह्या सगळ्यांची कारणं प्रत्येक फुल आणि प्रत्येक झाडासाठी वेगवेगळी आहेत. ह्या RUN TIME ERRORS आहेत. ज्यांचे उत्तर शोधून त्या त्रुटी पूर्णपणे दूर होतील ह्याची हमी देता येत नाही.

फुललेल्या फुलांचे सार्थक तेव्हाच होते जेव्हा ते देवास अर्पण केले जातात किंवा कोणीतरी त्याचा उपयोग सुशोभीकरणासाठी करतो. फुललेली कळी निर्माल्यात जाणार हे तर सत्यच असतं. पण महत्वाचं हे असतं की, तिचं निर्माल्य कसं होईल.

मग झाडाकडून कळ्यांना उमलवून फुलात रूपांतर करण्यात आलेल्या RUN TIME ERROR आणि त्या त्रुटी पूर्णपणे सोडवण्याची क्षमता ह्यावर त्याच भवित्व्य ठरेल का?

उत्तर हो पण आहे आणि नाही पण.. कारण फुल उमलण्यासाठी झाडाने त्याच्या परीने सर्व ते प्रयत्न करून फुल उमलल्यावर कोणाला तरी ते फुल दिसलं पाहिजे आणि त्याने ते झाडावरून काढलं पाहिजे आणि काळजी व प्रेमाने ते फुल नेऊन श्रद्धेने देवाला वाहिलं पाहिजे...(मुख्य म्हणजे त्याला ते नेता आलं पाहिजे मग वहायचा प्रश्न येतो) कारण हे तर त्या झाडाच्या हातात नाही..

म्हणजेच आपण पराधीन आहोत, कोणावर तरी अवलंबून आहोत. एका क्षणी माझ्याकडे FREE WILL होतं आणि एका क्षणी DESTINY!!

IS LIFE RELATED TO WAVE-PARTICLE DUALITY PRINCIPLE???

वेढू नेचर पण आहे. पार्टिकल नेचर पण आहे...पण वेढू आणि पार्टिकल दोन्ही एकाच वेळी असू शकत नाही.

~ श्रीनंद प्रशांत जोशी

## विजयनगर साम्राज्य आणि सम्राट कृष्णदेवराय

### अध्याय १: विजयनगरचे उत्थान

विद्यारण्य मुनी यांना एकदा स्वप्नात दृष्टांत झाला. त्या स्वप्नात त्यांनी एक ससा पळता-पळता लुप्त झाल्याचे पाहिले. या दृष्टांताचा अर्थ शोधताना त्यांना समजले की ही भूमी म्हणजेच विद्यानगर (आजची हम्पी) ही सामान्य नसून तिचा एक महान आध्यात्मिक इतिहास आहे.

हरिहर आणि बुक्काराय हे काकतीय साम्राज्याचे प्रमुख सरदार व खजिनदार होते. मुहम्मद बिन तुघलक याने त्यांना पकडून दिल्लीला नेले व त्यांचे धर्मांतर केले. जसे छत्रपती शिवाजी महाराजांनी नेतोजी पालकर यांचा हिंदू धर्मात पुनःसमावेश केला, त्याचप्रमाणे विद्यारण्य मुनींनी हरिहर व बुक्काराय या दोघांचा पुन्हा हिंदू धर्मात समावेश करून त्यांना एक सक्षम शासक बनवले.

यानंतर विद्यारण्य मुनींनी त्यांना आज्ञा केली की ही भूमी अत्यंत पवित्र आहे. येथे श्री हनुमानांचे जन्मस्थान अंजनाद्री पर्वत, वाली-सुग्रीव गुहा, श्रीराम व सुग्रीव यांचे मिलनस्थान ऋष्यमूक पर्वत, तसेच रामस्थापित शिवलिंग, मातंग व माल्यवन पर्वत आहेत. त्यामुळे हे स्थान संपूर्ण भारतात प्रसिद्ध झाले पाहिजे.

या उद्देशाने सम्राटांनी येथे सर्व हिंदूंच्या कुलदैवतांची मंदिरे बांधण्यास सुरुवात केली. त्यानंतर त्यांनी सुमारे एक हजार मंदिरे उभारली आणि विजयनगरला एक भव्य धार्मिक व सांस्कृतिक केंद्र बनवले.

### अध्याय २: मध्यवर्ती काळ व हिंदूंचे पतन

अशा प्रकारे हरिहर व बुक्काराय यांनी संगम राजवंशाची पायाभरणी केली आणि हिंदूंचे श्रद्धास्थान उज्ज्वल केले. परंतु त्यांच्या नंतर हे साम्राज्य दुर्बल होत गेले.

कल्याणी चालुक्य, जे पूर्वी अत्यंत बलशाली होते, ते आपापसातील संघर्षामुळे कमकुवत झाले आणि राज्याचे विभाजन झाले. विक्रमादित्य सहावा हा त्यांचा एक यशस्वी राजा मानला जातो. चोलांसोबतच्या सततच्या युद्धांमुळे अनेक राज्ये दुर्बल झाली.

यानंतर विजयनगर साम्राज्याचा काही भाग यादवांकडे गेला, तर उर्वरित काकतीय व होयसाळांच्या ताब्यात गेला. त्या काळात विरूपाक्ष, रामचंद्र, वीरविजय प्रौढ आणि देवराय दुसरा यांसारख्या राजांनी सुंदर मंदिरे व राजवाडे बांधले.

परंतु बहमनी सुलतानांच्या सततच्या आक्रमणांमुळे त्यांना खूप त्रास सहन करावा लागला. शेवटी पाच सुलतानांनी एकत्र येऊन संगम राजवंशाचा नाश केला.

त्याच वेळी उत्तर भारतात महमूद गझनी, मोहम्मद घोरी, ममलूक, खिलजी आणि तुघलक यांसारख्या आक्रमकांनी परिस्थिती गंभीर केली होती. दक्षिणेत मद्राई सुलतानतही एक मोठा धोका बनला होता. अशा प्रकारे उत्तर व दक्षिण दोन्ही भागांत हिंदू सत्तेचा न्हास झाला.

### अध्याय ३: तुलुववंशी सम्राट श्रीकृष्णदेवराय

संगम राजवंशाच्या पतनानंतर विजयनगरमध्ये नवीन राजवंश उदयास आले. त्यात प्रथम सुलुवा राजवंश सत्तेत आला. सुलुवा नरसिंहदेवराय हा त्यांचा पहिला राजा होता, जो अत्यंत बुद्धिमान व सक्षम शासक होता. त्याचे पूर्वज बुक्कारायाचे विश्वासू सरदार होते.

राज्यातील अराजकता वाढल्यानंतर नरसिंहदेवराय यांनी राज्यात सुव्यवस्था प्रस्थापित केली. परंतु गजपती पुरुषोत्तम याने त्यांची हत्या केली आणि पुन्हा राज्य अस्थिर झाले.

यानंतर सत्तासंघर्ष सुरू झाला. तिमम्भूपाल याची हत्या झाली आणि त्याचा धाकटा भाऊ नरसिंहदेवराय दुसरा गादीवर आला. तो लहान असल्यामुळे प्रत्यक्ष सत्ता तुलुबा नरसनायक या विश्वासू सेनापतीकडे होती.

नरसनायकाचा मुलगा वीर नरसिंह याला राजा होण्याची इच्छा होती. त्याने कट रचून नरसिंहदेवरायाची हत्या केली आणि सुलुवा वंशाचा अंत झाला. त्यानंतर तुलुबा वंश सत्तेत आला आणि वीर नरसिंह पहिला राजा झाला.

यानंतर आदिलशाहाने नरसनायकाची ४० सरदारांसहित हत्या केली आणि त्याचा धाकटा भाऊ नरसिंहदेवराय दुसरा गादीवर आला. तो लहान असल्यामुळे प्रत्यक्ष सत्ता तुलुबा नरसनायक या विश्वासू सेनापतीकडे होती.

कृष्णदेवराय यांनी आलियारामराय आणि महामंत्री तिमम्भूस यांच्या मदतीने आदिलशाहाचा पराभव केला. त्यांच्या पराक्रमामुळे ते अत्यंत लोकप्रिय झाले आणि विजयनगरच्या गादीसाठी सर्वात योग्य उमेदवार ठरले.

### अध्याय ४: सम्राट कृष्णदेवरायांची राज्यकारणी

सम्राट कृष्णदेवरायांची राज्यकारणी ही केवळ पराक्रमावर नव्हे तर बुद्धिमत्ता, न्यायप्रियता आणि दूरदृष्टीवर आधारलेली होती. त्यांच्या राज्यकारभाराचे अनेक प्रेरणादायी दाखले इतिहासात आढळतात.

पहिली कथा छत्रपती शिवाजी महाराजांशी संबंधित आहे. असे सांगितले जाते की, शिवरायांच्या राज्याभिषेकापूर्वी जिजामातांनी त्यांना दोन वर्षासाठी विजयनगर येथे पाठवले. त्या काळात शिवरायांनी तेथील स्थापत्यकला, संस्कृती, न्यायव्यवस्था आणि राजकारण यांचा सखोल अभ्यास केला. त्या वैभवाने प्रभावित होऊन त्यांनी असा संकल्प केला की, महाराष्ट्रातही याच प्रकारचे स्वराज्य निर्माण करायचे, त्यांचा यासंबंधी एक शिलालेख सुद्धा तेनाली मंडपामध्ये उपलब्ध आहे.

दुसरी कथा विजय विठ्ठल मंदिराशी संबंधित आहे. महाराष्ट्रात मुस्लीम आक्रमणांचा धोका वाढला असताना पंढरपूरच्या विठ्ठलाची मूर्ती सुरक्षित ठेवण्यासाठी ती विजयनगर येथे आणण्यात आली. तेथे कृष्णदेवरायांनी विजयविठ्ठल मंदिर बांधून त्या मूर्तीची पूजाअर्चा व्यवस्थित चालू ठेवली. नंतर परिस्थिती बदलल्यावर ती मूर्ती पुन्हा महाराष्ट्रात आणून पंढरपूर येथे प्रतिष्ठापित करण्यात आली.

तिसरा भाग म्हणजे कृष्णदेवरायांची न्यायव्यवस्था. ते अत्यंत न्यायप्रिय राजा होते. त्यांच्या दरबारात तेनालीराम (रामकृष्ण) यांसारखे बुद्धिमान विद्वान होते, जे अष्टदिग्गजांपैकी एक होते. तेनालीराम आपल्या बुद्धीचातुर्याने अनेक गुंतागुंतीच्या प्रश्नांचे समाधान करीत आणि न्यायप्रक्रियेला मदत करीत. कृष्णदेवरायांनी राज्यात शांतता, सुव्यवस्था आणि लोकांमध्ये विश्वास निर्माण केला. त्यांच्या अष्टदिग्गजांनी साहित्य, संस्कृती आणि प्रशासन यामध्ये मोठे योगदान दिले. तसेच त्यांचे महामंत्री तिमम्भूस हे अत्यंत विश्वासू आणि कुशल प्रशासक होते, ज्यांनी राज्यकारभार सुरळीत ठेवण्यात मोठी भूमिका बजावली.

याचबरोबर कृष्णदेवरायांचा दरबार हा साहित्य आणि विद्वत्तेचा केंद्रबिंदू होता. त्यांनी स्वतः "आमुक्तमाल्यदा" हा तेलुगू ग्रंथ लिहिला, जो त्यांच्या साहित्यप्रेमाचा उत्तम नमुना आहे. त्यांच्या दरबारात "अष्टदिग्गज" म्हणून ओळखले जाणारे आठ महान कवी होते. त्यामध्ये अल्लसानी पेद्दना (आंध्र कवितापितामह), नंदी तिमम्भूना, मदय्यगारी मल्लना, धूर्जटी, अय्यलराजु रामभद्रुडू, पिंण्डी सूरना, रामराजभूषण आणि तेनाली रामकृष्ण यांचा समावेश होता. या कवींनी अनेक काव्यग्रंथ, पुराणकथा आणि नाट्यसाहित्य निर्माण करून विजयनगरचा दरबार सांस्कृतिकदृष्ट्या समृद्ध केला.

ओडिशातील गजपती राजांसोबत विजयनगरचे जुने वैर होते. त्या काळात रुद्रप्रताप गजपती राज्यावर होता. एकदा कृष्णदेवराय आपल्या कुलदैवताच्या दर्शनासाठी गेले असता रुद्रप्रतापाने त्यांना पकडण्याचा कट रचला, पण तो अयशस्वी ठरला. उलट कृष्णदेवरायांनी त्याला पराभूत केले. त्यानंतर राजकीय समन्वय साधत रुद्रप्रतापाच्या मुली अन्नपूर्णा देवीसोबत त्यांनी विवाह केला.

यानंतरही रुद्रप्रतापाने पुन्हा कट रचून बहमनी व इतर सुलतानांना एकत्र आणण्याचा प्रयत्न केला. परंतु कृष्णदेवरायांनी अत्यंत कुशल राजकारण करून त्याला मानसिकदृष्ट्या कमकुवत केले. त्यांनी अशी परिस्थिती निर्माण केली की, रुद्रप्रतापाला स्वतःच्या सरदारांवरच संशय यायला लागला आणि शेवटी तो पराभूत होऊन पळून गेला.

कृष्णदेवरायांनी बहमनी सुलतानांनाही पराभूत करून आपले साम्राज्य अधिक विस्तारले. त्यांनी अनेक युद्धांत विजय मिळवून विजयनगर साम्राज्य दक्षिण भारतातील सर्वात बलशाली साम्राज्य बनवले.

त्यांची स्थापत्यकला देखील अद्वितीय होती. त्यांनी भव्य मंदिरे, राजवाडे आणि बाजारपेठा उभारल्या. त्यांनी जलव्यवस्था सुधारण्यासाठी भूमिगत पाण्याचे मार्ग (अंडरग्राउंड टनेल्स) तयार केले, ज्यामुळे शहरात आणि मंदिरांमध्ये पाणी पोहोचत असे. त्यांच्या काळात विजयनगर एक समृद्ध, सुस्थित आणि सुंदर नगरी बनली. अशा प्रकारे कृष्णदेवरायांची राज्यकारणी ही शौर्य, बुद्धिमत्ता, न्याय आणि विकास यांचा उत्कृष्ट संगम होती.

### अध्याय ५: कृष्णदेवरायांचा उत्तरकाल व विजयनगरचा ऱ्हास

सम्राट कृष्णदेवरायांच्या कारकीर्दीनंतर विजयनगर साम्राज्यावर हळूहळू ऱ्हासाची छाया पडू लागली. त्यांच्या मृत्यूनंतर अच्युतदेवराय गादीवर आले. त्यांनी काही काळ राज्य स्थिर ठेवण्याचा प्रयत्न केला, परंतु कृष्णदेवरायांसारखी दूरदृष्टी आणि नेतृत्व त्यांच्याकडे नव्हते.

यानंतर रामराय (अलियारामराय) यांच्या हातात प्रत्यक्ष सत्ता आली. राम राय यांनी पितृसत्ताक राज्य स्थापन करून स्वतःला शासक म्हणून स्थापित केल्यानंतर, त्यांनी बहमनी सल्तनतच्या उत्तराधिकार्यांमधील अंतर्गत संघर्षाचा फायदा घेण्याची राजकीय रणनीती अवलंबली, आणि ती त्यांच्या सुमारे वीस वर्षांच्या कारकिर्दीत यशस्वी ठरली.

परंतु, कल्याणवरील नियंत्रण टिकवून ठेवण्यासाठी केलेल्या आक्रमक प्रयत्नांनंतर आणि सल्तनतांशी अपमानास्पद वर्तन असलेल्या राजनैतिक व्यवहारांमुळे परिस्थिती बदलली. अहमदनगर आणि बीजापूरचे हुसेन निजाम शाह पहिले आणि अली आदिल शाह पहिले (पश्चिम), बरिदचे अली बारिद शाह पहिले (मध्य), आणि गोलकोंड्याचे इब्राहिम कुतुब शाह वली (पूर्व) — या चार मुस्लिम सल्तनतींनी चतुर वैवाहिक राजनैतिक युती करून एकत्र येत, जानेवारी १५६५ च्या शेवटी अलीया राम राय यांच्यावर हल्ला करण्याचा निर्णय घेतला. राम राय यांनी सुरुवातीला राजकारण चांगल्या प्रकारे हाताळले, परंतु पुढे त्यांच्या धोरणांमुळे अनेक शत्रू निर्माण झाले. विशेषतः दख्खनमधील सुलतानांनी एकत्र येऊन विजयनगरविरुद्ध कट रचला.

इ.स. १५६५ मध्ये ताळिकोटच्या युद्धात विजयनगर साम्राज्याला मोठा पराभव सहन करावा लागला. या युद्धात राम राय यांचे शेवटी शिरच्छेद करण्यात आला, तो स्वतः सुलतान निजाम हुसेन यांनी केला किंवा त्यांच्या आदेशावर इतर कोणीतरी केला, जरी आदिलशाह, ज्यांचे रायांशी मैत्रीपूर्ण संबंध होते, याला विरोध करत होता. परिणामी झालेल्या गोंधळात आणि हाहाकारात, रायांचे भाऊ तिरुमल यांनी संपूर्ण सैन्यासह माघार घेतली; त्यांनी विजयनगरमध्ये पुन्हा संघटित होण्याचा प्रयत्न केला, परंतु ते अपयशी ठरले आणि शहराच्या बाहेरच्या भागात स्थलांतर केले. त्यांचे दुसरे भाऊ वेंकटाद्री यांना अंध करण्यात आले आणि बहुधा युद्धात त्यांचा मृत्यू झाला. रामरायांचा मृत्यू झाला आणि विजयनगरची राजधानी हम्पी उद्ध्वस्त झाली. हे युद्ध विजयनगर साम्राज्याच्या पतनाचा केंद्र बिंदू ठरले.

त्यानंतरही काही काळ विजयनगरचे अस्तित्व टिकून राहिले, परंतु त्याची ताकद आणि वैभव मोठ्या प्रमाणावर कमी झाले. अखेरीस हे साम्राज्य इतिहासात विलीन झाले.

कृष्णदेवरायांच्या काळात जे वैभव, समृद्धी आणि सांस्कृतिक उंची विजयनगरने गाठली होती, ती त्यांच्या नंतर टिकवून ठेवणे शक्य झाले नाही. तरीही त्यांच्या कार्यामुळे विजयनगर साम्राज्य भारतीय इतिहासात एक सुवर्णयुग म्हणून ओळखले जाते.

~ श्रीनिधी उपाध्ये

## You don't have a self. You have an audience.

We like to believe our identity is something we own — forged in solitude, independent and solid. But watch what happens the moment someone important disagrees with you.

You are in a meeting. Someone asks your opinion on a decision — a direction you have thought about, a position you genuinely hold. You give it. Heads nod. You feel clear. Then someone whose approval matters to you — a manager, a mentor, someone you quietly want to impress — offers a different view, calmly and with confidence. And something happens inside you that you will spend the rest of the day pretending didn't. By the time the meeting ends, your position has shifted. You tell yourself you were persuaded by their reasoning. But you didn't actually process their reasoning. You processed their expression.

We do not form our identity and then seek recognition for it. We seek recognition first — and then construct an identity from whatever is reflected back. The self is not the author of its opinions. In most cases, it is their audience.

Hegel — the struggle for recognition  
In the *Phenomenology of Spirit*, Hegel argued that self-consciousness cannot exist in isolation. To know yourself, you need another consciousness to recognise you. Without that recognition, the self has no ground to stand on.

Hegel was not making a point about insecurity. He was making a point about structure. The self, for Hegel, is fundamentally relational — it comes into being through the gaze of another, not prior to it. This is not a flaw in certain people. It is the architecture of all human identity.

Think about the last time you were in a room where no one knew you. Not just strangers — but people whose opinion of you carried no weight. Notice how differently you held yourself. How much less carefully you chose your words. How quickly you contradicted yourself without distress.

The self does not shrink in the absence of an audience. It dissolves. What remains is not the real you — it is just you, unwitnessed, which turns out to feel like almost nothing at all.

Now contrast that with the moment someone whose respect you crave enters the room. Something assembles. You become more coherent, more consistent, more certain of what you think. That coherence is not authenticity — it is performance. But here is what makes it philosophically interesting: the performance is not fake. It is the

only version of you that ever fully exists.

We changed our opinion in that meeting not because we were weak, but because our opinion was never fully ours to begin with. Opinions, values, even personality traits — these are not possessions we carry and occasionally display. They are negotiations we conduct, continuously, with the people around us. The reason changing your opinion for social reasons feels like betraying yourself is that you believed you had a self independent enough to betray. You probably don't. None of us do, quite as much as we imagine.

Modern culture sends two contradictory messages simultaneously. The first: be yourself, be authentic, trust your instincts. The second: personal branding, reputation management, curate your image carefully. We have built an entire economy around helping people construct a self that looks self-sufficient while being meticulously calibrated to the approval of others. The influencer who performs spontaneity. The executive who performs conviction. The intellectual who performs independence. The machinery is identical. Only the costume changes.

This is not an invitation to stop trusting yourself. It is an invitation to be honest about what trusting yourself actually means. The next time you feel your position softening in front of someone important, don't ask "am I being weak?" Ask instead: whose recognition am I rearranging myself for right now, and is that person worth the rearrangement? Sometimes they are. Sometimes the recognition of someone wiser genuinely should shift your view. The question is whether you can tell the difference — between being persuaded, and being seen. In that meeting, you didn't betray your opinion. You revealed something more interesting: that your opinion was waiting, all along, to find out what it was worth to you — and it turned out that what it was worth depended entirely on who was in the room.

# WOMEN IN TECH

## Inspiring the Next Wave of Innovation

The future belongs to those who dare to create. Women are turning bold ideas into technological breakthroughs. Mona Patel is redefining Fashion, Technology, and Global Innovation.

### **"Innovation happens when creativity meets courage."**

Mona Patel's journey from Vadodara, India to the global stage is a story of vision, determination, and entrepreneurial excellence. As a technology-driven entrepreneur and innovator, she has successfully blended business strategy, creativity, and technology, becoming a prominent figure in both the corporate and creative worlds.

## Early Life and Education

Born in Vadodara, Gujarat, Mona Patel moved to the United States to pursue higher education and global career opportunities. She studied at Rutgers University and further enhanced her knowledge at prestigious institutions including Harvard Business School, Stanford, and MIT. Her academic foundation laid the groundwork for a career that bridges technology, entrepreneurship, and innovation.

## Entrepreneur Journey and Companies

Mona Patel is a serial entrepreneur, having founded more than eight companies across healthcare, technology, real estate, and innovation platforms. Her ventures are collectively valued at over \$100 million (approximately ₹834 crore), reflecting her strategic leadership and business acumen.

### **Key Companies:**

radXai – An AI-driven healthcare technology company focused on improving medical imaging and diagnostics.

CareFirst Imaging – A medical imaging solutions provider with global operations.

HauteX Ventures – A venture platform supporting technology and creative startups.

Her companies employ multidisciplinary teams globally and focus on leveraging technology to solve real-world problems, demonstrating a combination of innovation and market strategy.

## MET GALA — BRIDGING FASHION AND TECHNOLOGY

Mona Patel gained international recognition for her appearances at the Met Gala, the world's most prestigious fashion event.

Met Gala 2024: Mona made her debut in a custom couture gown featuring kinetic, moving butterfly elements, blending art, fashion, and technology in a groundbreaking display.

Met Gala 2025: She walked the red carpet with Vector, an AI-powered robotic dog named VECTOR, on a diamond-studded leash. This moment showcased the potential of artificial intelligence and robotics in creative expression and demonstrated the fusion of fashion with technology.

Her appearances challenged conventional perceptions, proving that technology can be expressive, interactive, and artistic.

### Philanthropy and Social Impact

Beyond entrepreneurship, Mona Patel is committed to social impact initiatives. She founded Couture for Cause, a platform that combines fashion and technology to support causes such as:

- Girls' education
- Women's empowerment
- Healthcare initiatives

Through auctions and events, her platform has raised significant funds and positively impacted thousands of lives globally.

### Global Recognition and Influence

Mona Patel represents a new generation of leaders where technology, creativity, and strategy intersect.

Her work inspires women and young innovators to pursue interdisciplinary careers and embrace bold ideas.

**She is known for her visionary leadership, innovative storytelling, and ability to leverage technology to create cultural and social impact.**

~ Purva Satav

Welcome to the Alumni Journey, where we reconnect with our incredible alumni and explore the stories that continue to inspire us. Today, we're joined by two exceptional individuals who have left a remarkable impact during their time with ACES.

First, we have Aniket Gore, known for his energy, creativity, and dedication. He is currently pursuing his MBA at Indian Institute of Technology Kanpur, taking his journey to the next level.

We're also delighted to have Shivendra Deshpande with us — an exceptional alumnus and former General Secretary of ACES, who is now pursuing his MTech at Indian Institute of Technology Hyderabad.

Let's dive into their journeys and gain valuable insights from their experiences.

# ALUMNI JOURNEY

**I'm Siddhi Deshmukh, and welcome to the Alumni Journey, where we connect with our inspiring alumni and explore their journeys beyond college.**

**Today, we have with us Aniket Gore, currently pursuing his MBA at Indian Institute of Technology Kanpur. Welcome, Aniket!**

Thank you so much, Siddhi. Hi everyone, I'm Aniket Gore. I completed my engineering in Computer Science and started my professional journey as a software developer at KPIT Technologies. Currently, I'm pursuing my MBA at Indian Institute of Technology Kanpur, where I'm exploring my interest in Product Management and Analytics.

**You mentioned you worked at KPIT Technologies. Was that in your final year or after? How was that experience, and how did it help your future?**

I worked at KPIT after my graduation. As a developer, I was building and improving features for software used in BMW cars. I really enjoyed the work, but over time, I became curious about more than just implementation. I started questioning why we were building certain features, how they impacted users, and what business problems they solved. That's when I realized Product Management lies at the intersection of building and decision-making.

**It's great to hear from you. Next question: You are inclined toward Product Management. What sparked your interest in this field?**

Like I said, at KPIT I got answers on how to build, but not why. I was curious about the "product funnel" from planning to execution. This is a technical institute, and I have a technical background, so Product Management and Analytics felt like a perfect fit and a natural progression from building products to shipping them.

**What was your percentile and which IIMs did you apply for?**

My percentile was 91.11. My interviews went really well, and I converted IIM Trichy, IIM Kashipur, IIM Amritsar, IIM Sirmaur, and IIT Kanpur.

Finally, I chose to join Department of Management Sciences IIT Kanpur.

**How did your experience in ACES contribute to your development? What are your memories?**

I joined ACES in my third year on the Treasury team. In my last year, I was the Head of the Event team. We arranged multiple events like Genesis and Algorithm. I enjoyed working with the committee and team members; those were great times.

**How is life at Indian Institute of Technology Kanpur?**

It's very "chill" academically. I only have about two lectures a day, maybe two and a half hours total. Sometimes I have three lectures, other days I have none—my Mondays are completely free. We have a "Maharashtra Mandal" here with UG, PG, and PhD students. We even had a Ganapati procession with a *dhol-tasha pathak*.

**You're also part of the student council at Indian Institute of Technology Kanpur. How has that experience been?**

It's been a great learning experience. Being in the student council gives exposure to leadership, teamwork, and handling responsibilities beyond academics. It's quite similar to what we experienced in ACES, just at a larger scale.

**What advice would you give to juniors aiming for an MBA?**

Don't think about an MBA in your second or third year. Focus on placements from the first year. Solve as many problems as possible on LeetCode and HackerRank. Prepare concepts like System Design. I started late in my sixth semester, but those who start early have an edge. Raise the placement level of the college.

Also, enjoy college. You will miss it once you're in the industry. You can't "bunk" work for 9 or 10 hours under a manager like you can bunk a class!

~ ANIKET GORE

**Hi Shivendra, welcome! I'm Priya. To begin with, could you briefly introduce yourself and tell us a bit about your journey so far?**

Sure! I'm Shivendra Deshpande, an alumna of PVG's COET. I completed my engineering with a CGPA of 9.29 and secured a rank in the top 1% in GATE 2025. Currently, I'm working as a Research Assistant and pursuing my M.Tech at Indian Institute of Technology Hyderabad, where I'm exploring my interest in research and advanced technologies.

**Great! What was the real motive behind you pursuing higher studies after engineering?**

My main motive was placement. Coming from a tier-3 college, it's very hard to get directly into tier-1 companies. I also wanted to explore research, so I thought joining an IIT or IISc would be a great opportunity. Initially, I was preparing for an MBA (IIMs), but a friend who was preparing for GATE suggested I just fill out the form so we'd have the same exam center. I cleared GATE in my third year, which gave me confidence. My father, who has an MBA, also encouraged me to pursue a technical master's degree instead.

**Many students feel they deserve more and aim higher in their careers. What shaped that mindset for you?**

I don't necessarily feel like I "deserve better"; I believe you get what you work for. It depends on your effort and dedication. Luck plays a role, but if you're dedicated—whether it's for placements or a good college—it will happen sooner or later.

**How did you stay mentally stable during the long phase between the exam, results, and admission?**

It didn't feel like a long phase because I had college exams and projects to finish. It was the end of my degree, so we were just trying to enjoy those moments and explore things. I was also preparing for interviews, though not very intensely. I wasn't entirely happy with my results, but I had to manage.

**You held important positions in student organizations. What did those responsibilities teach you beyond titles?**

The most important thing was teamwork. Whether in ACES or GDSC, I started as a member to interact with seniors and get exposure. These roles improved my public speaking and gave me confidence for later interviews. It taught me how to interact with and manage different types of people, how to handle disagreements, and how to convince others.

**Looking back at your college tenure, what is one thing you are most proud of?**

Academically, my GATE and college exam results. Personally, I'm proud of how I handled the tough decisions and uncertain situations that came up during those four years. Learning to deal with those challenges was a significant achievement.

**If you could go back to the first year, what one decision would you change?**

I can't recall any "wrong" decisions from the first year, though some happened later. My first year was online, so I mostly just joined classes and went back to sleep while my mother kept track of attendance for me. However, joining V-Labs in my first year was a great decision—it shaped me a lot, helped me learn programming, and introduced me to long-term friends from different departments.

**For students who feel confused, average, or lost right now, what would you like to tell them?**

Everyone faces confusion. Listen to your inner instinct rather than just following what friends are doing. Research what will suit your future life and try to maintain your calmness. Regarding feeling "average," you only feel that way if your surroundings make you feel that way. It's important to have a supportive environment—family, friends, or a partner—who motivates you. Sometimes you just need to spend time on a few things to eventually tackle them.

**How important was consistency compared to intelligence or talent?**

I don't think I'm the best person to answer this because I don't consider myself particularly intelligent or consistent. However, I think you should do what makes you happy, and then consistency follows. Life happens—family issues or health problems can disrupt consistency—but if you are happy with what you are doing, you will find a way to be successful.

**How did you balance academics, leadership work, and personal growth together?**

I never really "balanced" them, but academics wasn't a huge pressure. I prepared for GATE for about 8-9 months during my final year. For college exams, like most students, I studied just a day or two before the exams. My leadership roles in ACES actually helped reduce my stress from competitive exam preparation. Interacting with people and managing events was a way to lower my stress levels.

**What motivated you to join ACES in your early years?**

In my first year, Vinod Kamat (then GS) gave an introductory session. I was very introverted then and felt like I wanted to be like him—the way he involved everyone. I wanted to explore things and make friends, and Vinod was a big inspiration for me to join.

**What advice would you give juniors about choosing the right friend circle?**

Your friends shouldn't just validate everything you do; they should tell you when you are making a wrong decision. I believe you don't choose your friends—your friends choose you through a shared "vibe." Friendship is the only relationship you can choose for yourself, so you have to choose wisely. It's about having people around you who help you in every way—academically, personally, and with life decisions.

~ SHIVENDRA DESHPANDE

# PROFESSOR'S TALK

Good afternoon, sir. I am Shreya Gangatirkar, accompanied by Pranav Kalmitra. We are fortunate to have one of the most experienced teachers from PVGCOET & M, Professor Aditya Dongre Sir. He has agreed to share his story and valuable advice. We are glad and very excited to hear from you

**Prof. Aditya Dongre**

**Could you please tell us about your educational background and what inspired you to pursue a career in teaching?**

I completed my Bachelor's degree in Information Technology and later pursued my Master's in Computer Engineering. Currently, I am pursuing my Ph.D., which I began in 2022, with a research focus on Misinformation.

My inclination toward teaching was influenced by my father, who was also a teacher. Being familiar with the profession from an early age helped me understand its value and impact, which motivated me to choose this career path.

**You pursued your B.E. in IT and then switched to Computer Engineering for your M.E., was there a particular reason for this change, and did you notice any significant differences between the two fields?**

Information Technology is more software-oriented and focuses largely on application-based concepts. In contrast, Computer Engineering has a stronger foundation in hardware, including subjects like microprocessors and core computational methodologies.

This transition allowed me to gain a deeper understanding of the underlying systems that support software applications.

**Looking back at your college days, can you tell us about your college experience?**

I graduated in 2004, at a time when this field was still evolving. Since the subject was relatively new, many concepts had to be self-learned, and faculty from other departments, such as Electronics, contributed to teaching.

This environment encouraged me to work independently and build a strong foundation through self-study. I was particularly interested in hardware, which made the learning process even more engaging.

**You've been with our college since 2007, could you share your journey and how you've seen the college and its students change over the years?**

Over the years, I have observed a noticeable shift in student learning patterns. Earlier, students were highly focused and invested significant effort in understanding concepts, practicing assignments, and engaging in self-study.

Today, with the availability of advanced tools and resources, access to information has become easier. While this has its advantages, it also makes it important for students to stay focused on building strong fundamentals, especially in core subjects, as these are essential for career growth in technical fields.

**You have previously attended a 2 days National conference on "Relevance of Chhatrapati Shivaji Maharaj in the 21st Century", Do you have an interest in history, particularly subjects like Shivaji Maharaj?**

Yes, I do find such topics interesting. The conference focused on how Chhatrapati Shivaji Maharaj managed his empire and handled complex situations like warfare and administration. These insights can be meaningfully applied to modern-day leadership and decision-making.

**Could you tell us about your Ph.D. and how you manage to balance it alongside your teaching responsibilities?**

Balancing teaching and research can be challenging, as both require significant time and dedication. Research, in particular, demands continuous learning and staying updated with evolving technologies and academic standards.

There is also increasing emphasis on quality, including plagiarism checks and publication standards, which makes the process more rigorous. I utilize my available time efficiently to ensure steady progress in both areas.

**Apart from teaching, what are your interests or hobbies that you enjoy in your free time?**

During my school days, I was actively involved in playing cricket. Although I do not follow the sport as closely now, I have always admired Sachin Tendulkar, who remains one of my favorite cricketers.

**You work in areas like machine learning and deep learning, what interests you most about these fields?**

Today, almost every field is being influenced by artificial intelligence. Machine learning and deep learning play an important role in automating processes and improving efficiency.

What interests me most is their potential to simplify complex tasks and drive innovation across different domains.

**You've attended many workshops and FDPs (Faculty development programs) —how important is continuous learning for a teacher?**

Continuous learning is essential for educators. Workshops and FDPs help us stay updated with the latest advancements in technology and teaching methodologies.

They also provide exposure to new tools, including AI-based solutions, which can enhance the overall teaching and learning experience.

**What advice would you give to students preparing for placements?**

I strongly recommend that students focus on building a strong foundation in core subjects and developing logical thinking skills. Learning programming languages like C++ can help strengthen problem-solving abilities, which are transferable to other languages as well.

Many core technical roles still require in-depth knowledge of such fundamentals. While emerging technologies are important, a solid base ensures long-term career stability. Students should aim to build expertise rather than rely solely on trends.

**What are your thoughts on our college becoming autonomous, and how does it benefit students and the faculty?**

Autonomy gives more flexibility in designing the curriculum. It allows colleges to focus on important topics and include more practical learning where needed.

It also helps teachers maintain continuity in teaching and set the right level of difficulty, which improves the overall quality of education. While managing different academic patterns can be challenging, autonomy helps create a more structured and effective learning environment.

**As a faculty member in the Computer Department, what are your thoughts on ChatGPT and artificial intelligence, and how have you seen the industry evolve over the years?**

Artificial intelligence has significantly transformed the way we access and use information. While tools like ChatGPT make learning more accessible, it is important to use them responsibly.

Students should use such tools to enhance understanding rather than rely on them completely. When used correctly, technology can be a powerful aid in learning.

**You have been a part of PVG for a long time now, how would you describe PVG in one sentence?**

PVG provides a supportive environment with a good balance of freedom for both students and faculty.

**To end the interview, what life advice do you want your students to always keep in mind?**

Work hard and work smart—there are no shortcuts to long-term success. Focus on developing strong fundamentals and continuously improving your skills.

Stay curious, seek knowledge actively, and make the best use of your potential. In today's environment, maintaining focus and minimizing distractions is equally important for personal and professional growth.

# TECH COMPETITIONS

## Tech Competitions : Where Coders Turn Into Problem Solvers

If you ask any computer engineering student what really changes them, it is not just grades, but their confidence—the answer is often the same: tech competitions. There's something different about sitting in front of a problem with a ticking clock, knowing thousands of others are trying to crack it too. That's the world of competitions like the International Collegiate Programming Contest (ICPC), hackathons, and online coding contests. They push you beyond “I know this concept” to “I can actually use it under pressure.”

### Here are some competitions you should know:

The most famous of them all is **ICPC**. It's a team-based contest (usually 3 members) where you solve challenging algorithmic problems in a limited time. The journey typically looks like this:

- Register for online preliminary rounds (often hosted on coding platforms)
  - Qualify for regionals (like ICPC Asia Regionals in India)
  - Aim for the global finals (the dream stage)
- Apart from ICPC, Indian students actively participate in contests on platforms like:

- CodeChef
  - Codeforces
  - LeetCode
- These platforms host weekly/biweekly/monthly contests that are perfect for building consistency.

Then come hackathons - it is arguably the most fun format:

- Smart India Hackathon (SIH)
- HackWithInfy
- College-level and private hackathons

Here, instead of just solving problems, you build something real—it may be an app, a model, or a system.

### How Do You Actually Apply?

For ICPC:

- Visit the official ICPC site and register your team
- Choose your college and regional contest
- Your college might need to approve or assign a coach
- Then participate in the preliminary rounds

For coding contests:

- Just create an account on platforms like CodeChef, Codeforces, or LeetCode
- Join contests directly—no selection needed
- Start from beginner contests and gradually move up

For hackathons:

- Watch platforms like:
  - Unstop (formerly Dare2Compete)
  - Devfolio
  - HackerEarth
- Register individually or as a team
- Submit idea proposals (sometimes required)

## How Should You Prepare?

Here's the honest truth, you don't need to be a genius, you need to be consistent.

### 1. Build Strong Basics

Start with:

- Arrays, Strings
- Recursion
- Linked Lists, Trees
- Graphs
- Dynamic Programming

These are the basics; practicing them will help you a lot in easy as well as medium-level problems.

### 2. Practice Smart (Not Just Hard)

Instead of randomly solving problems:

- Follow a structured list (like DSA sheets)
- After solving, analyze better solutions
- Learn frequently asked patterns

### 3. Give Contests Regularly

This is the most important step. You will panic initially and probably solve very few problems in your first few contests, but that's completely normal. Over time, with regular practice, you'll start recognizing patterns faster and thinking more clearly under pressure.

### 4. Upsolve After Contests

This is where real growth happens. After every contest, solve the problems you couldn't. Try to understand editorials and note down new techniques you discover. Keeping a small record of tricks or patterns can really help in the long run.

### 5. For Hackathons:

Build, don't just plan. Many students struggle at this stage because they focus too much on ideas and not enough on execution. In reality, winning teams are not just the ones with the most innovative concepts, but those who can bring their ideas to life efficiently.

They usually have a solid foundation in development, whether it's web, mobile apps, or machine learning, and more importantly, the ability to implement solutions quickly under time constraints. Instead of overthinking or trying to perfect the idea, they focus on building a working prototype and showing real impact.

## Why These Competitions Matter?

At first glance, it might feel like these competitions are just about rankings, certificates, or adding something to your resume. But once you actually start participating, you realize they offer much more.

They naturally improve the way you approach problems—you begin to think faster, write cleaner code, and understand logic more deeply.

Over time, you also get comfortable working with others, especially in team-based contests like ICPC or hackathons, where collaboration becomes just as important as coding itself.

These experiences also help a lot during placements, since companies value people who can think on their feet and solve real problems.

But probably the biggest change is in your mindset—you slowly move away from memorizing solutions and start genuinely understanding and reasoning through problems on your own.

## Final Thoughts

Every coder you look up to today has been through that awkward phase of not understanding questions, getting stuck, or solving almost nothing in their first few contests. They didn't begin as experts—they improved gradually by staying consistent and not giving up after failures.

So whether you're attempting your first coding contest, joining a hackathon, or aiming for something like ICPC, the most important step is simply to begin.

Over time, you'll realize that these competitions are not really about medals or rankings, but about shaping you into someone who can think clearly, adapt quickly, and solve problems with confidence.

~ Vedang Sagade

# SHORT PASSAGE

~ Pratika Bankar

## The Night Before Exams

The night before exams is a strange mix of panic and productivity. Suddenly, the same syllabus that looked 'manageable' a week ago feels like an impossible mountain. Notes appear out of nowhere, group chats become active after days of silence, and everyone magically turns into a motivational speaker, "Bro, we've got this!", even though no one really does.

It's the night of last-minute promises: "Next semester, I'll study regularly." Coffee becomes a survival tool, and sleep feels like a luxury we can't afford. Somehow, topics we ignored for weeks now demand urgent attention, and we try to fit an entire semester into a few hours.

Yet, in all the chaos, there's a strange sense of unity. Everyone is equally confused, equally stressed, and somehow, that makes it better. Because no matter how the exam goes, this night, filled with panic, laughter, and a little bit of hope, is something every student understands.

## If College Walls could talk.....

If the walls of our college could talk, they wouldn't just echo lectures; they would tell stories. The classroom walls would whisper about last-minute revisions, silent prayers before exams, and dreams scribbled in the margins of notebooks. The corridors would hum with laughter, footsteps rushing to beat the bell, and conversations that felt more important than any lecture inside.

The canteen walls, though, would have the loudest voice; filled with stories of friendships, shared meals, heartbreaks, and endless cups of chai that somehow made everything feel better. Even the quiet corners of the campus would speak of moments unseen—of someone finding confidence, someone battling self-doubt, someone deciding who they want to become.

These walls have seen us grow, not just as students, but as individuals. And while they may remain silent, their stories live within us, shaping memories we will carry long after we leave these halls.

# AI TOOLS

~ Harshal Joshi

Nowadays Artificial Intelligence is no longer a futuristic concept limited to science fiction; it has become an essential part of modern student life. From understanding complex topics and completing assignments to building projects and preparing for placements, AI tools act as smart assistants that help students work more efficiently and creatively.

Today's students often manage multiple responsibilities such as exams, hackathons, projects, internships, and skill development. In such a fast-paced environment, AI tools help reduce the time spent on repetitive tasks and allow students to focus more on learning, problem solving, and innovation. When used wisely, AI does not replace learning but enhances it by helping students improve productivity, develop skills faster, and stay better prepared for future careers in fields like Computer Engineering, Data Science, and Artificial Intelligence.

In this article, we explore useful AI tools that every student should know. These tools can support students in academics, hackathons, exams, projects, placements, coding, and everyday productivity, making learning more efficient and effective.

## 1} AI for Studying

AI tools help students quickly understand topics by generating summaries, flashcards, and practice questions.

- Tools
  - NotebookLM – summarizes PDFs and generates questions
  - Knowt – converts notes into flashcards and summaries
  - Quizgecko – creates MCQs and practice questions

## 2} AI for Hackathons

AI tools help students quickly move from idea to implementation by assisting in system design, frontend development, backend setup, and full project generation.

- Idea Planning
  - DiagramGPT – creates workflow diagrams
- Frontend Development
  - Uizard – converts ideas into UI designs
  - Locofy – converts designs into frontend code
- Backend Development
  - Supabase – creates databases and APIs
  - Firebase Studio – simplifies backend integration

## 3} AI for Presentation, posters, and research work

AI tools help create professional presentations, posters, and assist in research for academic projects.

Presentation and Poster Tools:

- Gamma – creates presentations automatically
- Presentations.ai – generates web based structured slides
- Canva Magic Design – posters and graphics

Research Tools:

- Elicit – finds research papers

## 4} AI for Placements Preparation

AI tools help create professional resumes and prepare for interviews.

- Teal – improves resume structure
- Kickresume – generates resume and cover letter

## 5} AI for Coding & Documentation Writing

AI tools help students write code faster and create clear technical documentation.

Coding Tools

- GitHub Copilot – auto code suggestions
- Codeium – free coding helper
- Replit Ghostwriter – coding support

Documentation Writing Tools

- Notion AI – structured documentation
- Grammarly – improves grammar
- QuillBot – rewrites content clearly

## 6} Special Mentions : Daily Drivers

These tools are widely used daily for studying, coding, writing, brainstorming, and problem solving.

- ChatGPT – studying, coding, writing help
- Google Gemini – research and summaries
- Claude – strong reasoning and explanations

These AI tools are becoming essential companions in a student's academic journey, helping simplify learning, boost productivity, and enhance creativity. By using these tools wisely, students can save time, build better projects, and stay prepared for future careers in the evolving tech-driven world.

# MEMES

**HOW IT FEELS WHEN I FIX A BUG NO ONE KNEW I WAS RESPONSIBLE FOR**

**WHAT GIVES PEOPLE FEELINGS OF POWER**

**Scared Dev**  
@scared\_dev

I saw a guy coding today.  
No cursor.  
No windsurf.  
No chatgpt  
He just sat there. Typing code manually.  
Like a psychopath.

**Coding is fun until the code starts doing what you told it to do instead of what you wanted it to do.**
