ABOUT ACES

ACES Highlights: A Year of Code, Creativity & Innovation

The academic year kicked off with the Inauguration of ACES, marking the beginning of an exciting journey packed with technical events, workshops, and creative fests. The new committee was introduced with fresh energy, setting the tone for a vibrant year ahead.

Before our Inauguration, ACES conducted two events:

Picture Perfect, a creative photography contest where participants captured the festive colors and traditions of Ganpati celebrations and **Tech Trivia**, a coding-based competition where participants tested their programming skills, logical thinking, and technical knowledge.

In October, ACES hosted **Server Foundations 101**, a hands-on workshop conducted over two days for SE, TE, and BE students. The session offered in-depth knowledge of server hardware and website hosting.

On 20th October, **Code Mode**, a competitive coding event, challenged participants to test their problem-solving skills. With an exciting prize pool and strong turnout from TE and BE students, the event was a hit among coding enthusiasts.

Diwali Fiesta (29th Oct – 4th Nov) brought a festive twist with events like **PhotoFest**, **Redesign Rumble**, **Inkspire**, **Crack Up Carnival**, and **Art Arena**, giving students a platform to showcase their creativity.

The momentum continued with **GENESIS 2025**, ACES' annual flagship technical fest, held on 18th and 19th January. Students participated in sessions covering trending tech domains, resume building, placements, internships, and startup insights.

The year concluded with a bang at **InnoVerse Hackfest 2025**—a 24-hour national-level hackathon held on 22nd–23rd March. With a prize pool of ₹63,000, meals, accommodation, and intense innovation, the hackathon was a major highlight, encouraging students to code, collaborate, and conquer.

ACES Website:

ACES also continued to update its official website, which serves as the central hub for all things ACES—from team member details and the event calendar to archives of our past magazines. For InnoVerse, a separate, fully-functional registration website was built within hours—just another example of how the team keeps pushing boundaries.

ABOUT COLLEGE

College History

Vidyarthi Griha was established in 1909 by a group of dedicated and visionary social workers with the primary aim of providing educational facilities to deserving and underprivileged students.

PVG's College of Engineering and Technology and G. K. Pate (Wani) Institute of Management was established as an unaided college in 1985 under the parent institute PVG. PVGCOET is affiliated with Savitribai Phule Pune University and is approved by AICTE (All India Council for Technical Education) and the Government of Maharashtra.

The parent institute, Pune Vidyarthi Griha—formerly known as Pune Anath Vidyarthi Griha—is a well-known charitable institution in Maharashtra, established in 1909 by a group of dedicated and visionary educationists.

The primary mission of the institute is to provide progressive and value-added educational facilities for the deserving and underprivileged students of society. Today, the institution has grown into a big banyan tree, with its branches spread across Pune, Mumbai, and Nashik.

The institute conducts a wide spectrum of educational programs, from pre-primary to higher education, in professional fields like Engineering, Technology, Management, Computer Science, Commerce, Science, etc. Pune Vidyarthi Griha governs various institutions in Pune. Through these institutions, it offers facilities ranging from Junior KG to university-level professional courses for deserving students.

Pune Vidyarthi Griha is the only institute in India that has made significant efforts to promote professional education in the printing field since 1926. It took the lead in establishing degree and diploma programs in Printing Engineering and Communication Technology, approved by AICTE.

The institute also runs hostels for destitute boys and girls in Pune, and an Old Age Home (Shatayu Bhavan) in Pune.

PVG has a modern printing press and a publications division. It primarily publishes technical books that are well-recognized and widely used.

Institution Memberships

- PVGCOET & GKPIM is a member of the Automotive Research Association of India (ARAI) Knowledge Centre (Library), Pune
- PVGCOET & GKPIM is a member of the British Library (Pune)
- PVGCOET & GKPIM is a member of the Mahratta Chamber of Commerce, Industries and Agriculture
- PVGCOET & GKPIM is a member of the Flexography Technical Association (FTA)
- PVGCOET & GKPIM is a member of the Graphic Arts Technical Foundation (GATF), USA

The college is expected to attain autonomous status in the year 2026.

Clubs in College

ACES

The Association of Computer Engineering Students (ACES) is a student-driven club at PVG's College of Engineering and Technology, Pune. It organizes technical events, workshops, and activities for Computer Engineering students to enhance their skills and stay updated with industry trends. ACES promotes innovation, teamwork, and professional development through hands-on learning and community engagement.

ITSA

The Information Technology Students' Association (ITSA) is a student-driven club that organizes technical events, workshops, and activities for IT students to enhance their skills and industry knowledge. It fosters innovation, collaboration, and professional growth.

TESA

The Telecommunication Engineering Students' Association (TESA) is a student-led club that conducts workshops, seminars, and technical events for Electronics and Telecommunication students to strengthen their practical knowledge and skills. It emphasizes innovation, teamwork, and industry readiness.

MESA

The Mechanical Engineering Students' Association (MESA) hosts workshops, competitions, and events to build practical skills among Mechanical Engineering students. It encourages creativity, teamwork, and career-oriented development.

AIDEAS

The Artificial Intelligence and Data Science Students' Association (AIDEAS) is a vibrant club that organizes sessions and events focused on AI, machine learning, and data science. It helps students stay ahead of tech trends through learning and collaboration.

PRINTERA

The Printing Engineering Students' Association (PRINTERA) supports skill development through technical sessions, workshops, and industry interactions. It focuses on both technical and creative aspects of printing engineering.

EESA

The Electrical Engineering Students' Association (EESA) hosts workshops by industry experts, competitions, and events to build practical skills among Electrical Engineering students. It encourages teamwork, and career-oriented development.

EDC

The Entrepreneurship Development Cell (EDC) nurtures entrepreneurial spirit through seminars, startup talks, and innovation events. It supports students in transforming ideas into impactful ventures.

PVG ACM

The PVG ACM Student Chapter promotes computing knowledge through coding competitions, tech talks, and workshops. It helps build a strong foundation in computer science and prepares students for tech careers.

PVG Art Circle

This club nurtures artistic talent through drawing, painting, sketching, and installations. It participates in intercollegiate competitions such as Firodiya and Purushottam Karandak, promoting creativity and cultural expression.

**PVG Samsara**

Samsara is the college's annual cultural festival. It features dance, drama, music, fashion shows, and literary events, fostering unity and inclusivity among students.

PVGCOET IIC

The Institution's Innovation Council (IIC) fosters innovation and entrepreneurship through hackathons, ideation workshops, and startup sessions, enhancing students' problem-solving and design thinking abilities.

TEDxPVGCOET

An independently organized TED event that brings together inspiring speakers to spark curiosity, learning, and meaningful conversations among students.

GDSC PVGCOET

The Google Developer Student Club conducts hands-on sessions in web development, machine learning, cloud computing, and Android development. It fosters collaboration and skill-building among aspiring developers.

PVG Robotics Club

The Robotics Club features a dedicated lab with a KUKA robot and hosts workshops, competitions, and hands-on projects related to robotics, control systems, and AI.

**PVGCOET Sports**

This club promotes physical well-being and team spirit through various sports like cricket, football, volleyball, and athletics. It organizes both inter- and intra-college tournaments and fitness events.

Music Club

A platform for students to express their talents in vocal and instrumental music. The club actively participates in college events and fosters harmony and self-expression through music.

TECH STARTUPS

1. CRED: Revolutionizing Credit Card Payments in India's Fintech Landscape

In the bustling world of Indian fintech, one name has captured attention with its bold vision and rapid ascent—CRED. Since its inception in 2018, CRED has reimagined the way Indians approach credit card payments, combining innovation, rewards, and sleek user experience to build a financial platform that's as engaging as it is practical.

The Visionary Behind the Venture

At the heart of CRED's success is **Kunal Shah**, a seasoned entrepreneur known for his keen insights into consumer behaviour and financial systems. Before CRED, Shah founded **FreeCharge** in 2010, a trailblazer in digital payments, which was later acquired by **Snapdeal** for an impressive \$400 million in 2015. His subsequent stint at **Sequoia Capital** allowed him to delve deeper into the fintech space, where he identified a compelling gap: credit card users lacked meaningful rewards for timely payments. From this realization, CRED was born.

A Unique Business Model

Launched with a clear mission, CRED set itself apart by rewarding users for paying their credit card bills on time. Targeting individuals with high credit scores, the app curated a community of responsible borrowers and offered them exclusive rewards and cashback. This approach not only encouraged better financial habits but also created a sense of elite membership among users.

Soaring Growth and Recognition

CRED's growth story is nothing short of remarkable:

- **Unicorn Status:** In April 2021, CRED became a unicorn, achieving a valuation of over \$1 billion within just three years.
- **Market Share:** That same year, it handled approximately 22% of all credit card payments in India.
- **User Base:** With millions of users onboard, the platform's popularity soared, attracting attention from tech enthusiasts and investors alike.

Expanding Horizons: Products and Innovations

What began as a credit card bill payment app has evolved into a versatile fintech ecosystem. Among its flagship offerings:

- **RentPay:** Enables users to pay monthly rent using their credit cards, turning large expenses into opportunities to earn rewards.
- **CRED Store:** A curated marketplace offering premium products and experiences exclusively to CRED members.
- **CRED Mint:** A peer-to-peer lending platform that allows members to earn interest by lending to other trustworthy users.

These additions have diversified CRED's portfolio, increased user engagement, and cemented its status as a lifestyle brand in the financial domain.

Backing the Vision: Funding and Investment

CRED's innovation has not gone unnoticed in the investor community. The startup has raised over **\$800 million** in funding from leading venture capital firms, fuelling its rapid expansion and enabling it to consistently roll out new features and services.

Facing the Heat: Challenges and Criticisms

Despite its success, CRED has not been immune to criticism. Industry watchers have often questioned its revenue model, particularly the sustainability of rewarding users without traditional income streams. In response, the company has explored various monetization strategies, including strategic partnerships, premium services, and an expanded suite of financial products—aiming to build a more balanced and sustainable business model.

A Fintech Trailblazer

CRED's journey is a compelling story of vision, execution, and user-focused design. By transforming the act of paying credit card bills into a rewarding and enjoyable experience, CRED has not only disrupted the fintech space but also set new benchmarks for customer engagement in financial services.

As it continues to innovate and expand, CRED stands poised to remain at the forefront of India's fintech revolution—proving that financial responsibility can indeed be fun, rewarding, and even a little luxurious.

2. Zor: Empowering Rural India with Pay-Per-Use Solar Batteries

Zor, co-founded by Harvard MBA graduates **Rea Savla** and **Vishesh Mehta**, is tackling rural India's energy challenges through an innovative network of shareable, modular batteries. These smart batteries, charged using both grid and renewable sources, can be rented by communities—offering farmers reliable electricity for irrigation, mechanization, and home backup—wherever and whenever they need it. All this comes at a fraction of the cost of diesel, without the reliability issues often associated with traditional solar systems.

Genesis and Research

Zor's inception was rooted in the founders' deep commitment to understanding the specific needs of rural farmers. Over a period of 18 months, Savla and Mehta visited **25 villages** and conducted in-depth interviews with **over 700 farmers**. Their field research revealed two major challenges to agricultural productivity: unreliable electricity and the high cost of diesel fuel.

Solution Development

Initially, the founders explored **solar-powered irrigation tools**, but these posed issues related to weather variability and affordability. As a result, they pivoted toward developing **modular lithium-ion batteries**, embedded with versatile software to ensure compatibility with a range of agricultural appliances. These batteries can be charged using both grid and renewable energy sources, making them well-suited to the inconsistent power infrastructure in rural India.

Community-Centric Model

Zor's business model centers around **community engagement**. The company sets up **local charging stations** and involves residents in operations, which enhances accessibility and instills a sense of ownership within the community. By reducing dependence on diesel, Zor not only helps lower operating costs for farmers but also promotes **sustainable agricultural practices**.

Did you know?

- CRED only lets you in if your credit score is above 750 — it's like a VIP club for your wallet.
- With CRED Pay, you can shop at premium brands and get rewarded — imagine being paid for spending!

Achievements and Recognition

Zor's unique approach has earned notable recognition:

- **Finalist** in the **Harvard Innovation Labs' 2024 President's Innovation Challenge**
- **Westly Prize** winner for its efforts in addressing rural India's electricity access through its battery-sharing model

Future Aspirations

Looking forward, Zor aims to expand its impact in several key areas:

- Develop **lightweight, stackable batteries** for broader applications, including **electric vehicles**.
- Ensure that **at least 50% of its field staff are women**, empowering a traditionally marginalized demographic
- Form strategic partnerships with **rural entrepreneurs and manufacturers** to scale operations

Through its innovative energy solutions and community-driven approach, Zor is reshaping the agricultural landscape in rural India—making clean, reliable, and affordable power accessible to those who need it most.

TECH BLOGS

MakuluLinux LinDoz 2025: AI Meets Desktop Linux

MakuluLinux LinDoz 2025 stands out as one of the most advanced AI-powered Linux distributions. Built on a modified Cinnamon desktop and Debian testing base, it delivers a robust, user-friendly platform with unlimited access to AI tools — all for free.

AI Integration Like Never Before :

While many Linux distros experiment with AI via system management enhancements and performance tweaks, MakuluLinux takes a bold leap. Developer Jacque Montague Raymer has pushed traditional Linux boundaries for years, culminating in LinDoz 2025, which directly rivals platforms like ChatGPT. This OS offers deep customization while maintaining a familiar, Windows-like interface.

Challenges and Breakthroughs :

Raymer faced significant hurdles integrating AI, especially maintaining user privacy, ensuring accessibility, and choosing the right code base. The Ubuntu-based version proved unstable, especially with conflicting Python updates. Switching to Debian, known for its rolling releases and driver support, enabled more stability and flexibility for AI features.

Electra: The Heart of LinDoz :

At the core of LinDoz 2025 is Electra — not just an AI assistant, but a full-fledged platform with a human-like voice, video avatar, and multi-modal capabilities. Electra is powered by a sophisticated system of carefully selected and trained models, offering services like:

Text, audio, and video generation

Image creation

Language translation

Text-to-speech and more

Running across 27 dedicated servers, Electra processes tasks based on user needs, choosing the best-suited models behind the scenes. Unlike commercial alternatives, Electra doesn't rely on OpenAI, making free, local AI integration possible

Conclusion

MakuluLinux LinDoz 2025 redefines what's possible in a desktop Linux environment. With seamless AI integration, a stable Debian core, and an innovative virtual assistant, it offers both power users and beginners a futuristic Linux experience — no subscription required.

Nvidia's GTC Highlights: Insights into how Nvidia's GPU Technology Conference has become a pivotal event, showcasing advancements in AI, robotics, and autonomous Vehicles.

Nvidia GTC: The Super Bowl of AI and Tech Innovation Nvidia's GPU Technology Conference (GTC) has grown into one of the most influential Tech events, often referred to as the "Super Bowl of AI." What started as a conference for GPU developers has now evolved into a global platform for showcasing breakthroughs in Artificial intelligence, robotics, autonomous vehicles, and high-performance computing. Led by Nvidia CEO Jensen Huang, the event attracts researchers, engineers, developers, And business leaders eager to explore the future of AI-driven technology.

Revolutionizing AI with Blackwell GPUs

One of the biggest highlights of GTC 2025 was the unveiling of Nvidia Blackwell GPUs, the Next-generation AI chips designed to accelerate deep learning, large language models (LLMs), and generative AI applications. These GPUs boast faster processing speeds, Lower power consumption, and enhanced AI capabilities, making them essential for hyper scale data centers, research labs, and enterprises looking to leverage AI at scale. The Blackwell architecture represents a significant leap in AI training and inference efficiency, positioning Nvidia at the forefront of the AI revolution.

Advancements in Robotics and the Omniverse

Nvidia continues to push the boundaries of robotics with enhancements to Isaac, its AI Powered robotics platform, and Omniverse, a virtual environment for industrial Simulation and collaboration. Companies are using these technologies to design, test, and deploy autonomous robots, industrial automation solutions, and smart Manufacturing systems. With real-time physics simulation and digital twin capabilities, Nvidia Omniverse is becoming a critical tool for industries like automotive, healthcare, And infrastructure development.

The Future of Autonomous Vehicles

Another major focus of GTC was autonomous driving technology. Nvidia's Drive Thor platform is set to redefine self-driving capabilities, offering high-performance AI-powered perception, decision-making, and real-time processing for autonomous vehicles. With partnerships spanning across leading automotive manufacturers, Nvidia is paving the Way for the future of fully autonomous and AI-driven transportation.

AI for Science, Research, and Enterprise

Beyond AI-powered consumer and industrial applications, Nvidia is making a huge Impact in scientific computing, healthcare, and enterprise AI. The company's AI-powered Drug discovery tools, climate modeling simulations, and financial AI solutions are helping businesses and researchers solve complex global challenges. Enterprises are increasingly adopting Nvidia's AI infrastructure to develop custom large language models

(LLMs), generative AI applications, and real-time analytics platforms.

Why GTC Matters More than Ever Nvidia's GTC has transformed into a must-watch event for anyone involved in AI, tech Innovation, and digital transformation. The announcements made during the conference shape the direction of industries worldwide, influencing how businesses, researchers, and governments adopt AI, robotics, and next-gen computing technologies. With AI-Driven advancements in nearly every sector, Nvidia's GTC remains a pivotal event for understanding the future of technology and innovation.

NON TECH BLOG

Warriors of Yesterday, Defenders of Today: The Enduring Legacy of Maratha Military Genius

On a misty morning in February 1656, Afzal Khan's massive army moved through the Western Ghats, hunting for the elusive Maratha forces of Chhatrapati Shivaji Maharaj. What the Bijapur general couldn't grasp was that he wasn't simply pursuing an enemy—he was being meticulously drawn into a trap. The subsequent Battle of Pratapgad wouldn't just change the course of Maratha history; it would establish principles of asymmetric warfare that continue to shape Indian military doctrine today.

This remarkable continuity—from the brilliant strategies of 17th-century Maratha warriors to modern India's defense policies—reveals how deeply our ancestors' military wisdom remains embedded in contemporary security thinking.

Chhatrapati Shivaji Maharaj: Military Visionary Beyond His Time

The Perfect Blend of Courage and Strategy

When twenty-year-old Chhatrapati Shivaji Maharaj captured the seemingly impregnable Torna Fort in 1645 with just a handful of Mawlas (soldiers from the Maval region), he demonstrated that heart and mind together could overcome overwhelming odds:

The Conquest of Kondhana (Sinhagad):

In 1670, Chhatrapati Shivaji Maharaj's general Tanaji Malusare scaled the vertical cliff face of this supposedly unconquerable fortress at night. Despite Tanaji's heroic death in the subsequent battle, his forces secured this critical stronghold. Today, the Indian Army's specialized mountain units train in similar cliff-assault techniques, particularly in high-altitude warfare schools in Gulmarg and Siachen, acknowledging that human skill and determination can overcome natural obstacles.

- The Surat Raid of 1664 showcased Shivaji Maharaj's strategic brilliance when he bypassed Mughal outposts with 4,000 cavalry to strike directly at Surat, the empire's wealthiest port. This operation demonstrated the effectiveness of targeting economic centers rather than military strongholds a principle still reflected in modern Indian strategic doctrine.
- The Personal Combat at Pratapgad (November 10, 1659) highlights Shivaji Maharaj's tactical ingenuity when he neutralized the larger Afzal Khan using concealed wagh nakh (tiger claws), emphasizing the importance of personal preparedness and intelligence-based planning in warfare.
- The strategic genius of Shivaji Maharaj continues to influence India's defense systems today. His fort network wasn't merely defensive but an integrated territorial control system. The architectural brilliance of Raigad, with its layered defenses and sustainability features, mirrors modern border security approaches

- Shivaji Maharaj revolutionized maritime power through installations like Sindhudurg Naval Base, while his "Living Forts" concept created resilient communities that could withstand prolonged sieges.
- Perhaps his most enduring contribution was his sophisticated intelligence network, complemented by tactical innovations like the wagh nakh (tiger claws) that emphasized personal preparedness and strategic planning.
- These centuries-old principles of mission command, fortress warfare, and principled leadership continue to inspire India's military doctrine and character development today.

Perhaps Chhatrapati Shivaji Maharaj's most revolutionary contribution was his sophisticated intelligence system:

- The Bahirji Naik Model: Shivaji's spymaster developed one of history's first systematic intelligence networks, influencing modern Indian intelligence operations.
- Counter-Intelligence: Shivaji utilized double agents and disinformation specialists, tactics still employed in Indian counter-intelligence today.

Chhatrapati Sambhaji Maharaj: Resistance Against All Odds

When Chhatrapati Sambhaji Maharaj ascended the throne in 1680 following his father's death, he faced the full might of Emperor Aurangzeb's army during the 27-year Mughal-Maratha War:

The Defiance That Inspired a Nation

- The Burhanpur Raid (1681): Sambhaji Maharaj's daring strike against Mughal logistics demonstrated offensive capability under pressure.
- Ramsej Fort Defense (1682-1685): This small hill fort withstood years of Mughal sieges through Sambhaji Maharaj's decentralized command structure.
- Sambhaji Maharaj's "Supreme Sacrifice" - his defiance despite brutal torture after capture in 1689, refusing to convert to Islam even until execution, which inspired continued Maratha resistance and influences modern Indian military's emphasis on values and character development.

Modern Indian Defense: The Maratha Legacy in Action

Today's Indian security architecture draws numerous elements from this rich Maratha heritage:

Territorial Defense Transformed

- The Border Roads Organization (established 1960) follows Shivaji Maharaj's principle that controlling access routes is as crucial as military presence.
- The Integrated Border Management System represents the technological evolution of Shivaji Maharaj's fort-based visual signaling systems.
- The Mountain Strike Corps (raised 2013) applies Maratha principles of terrain mastery, mobility, and tactical flexibility in high-altitude operations.
- Special Forces units like SFF and MARCOS conduct operations similar to Maratha forces, emphasizing stealth and surprise.
- Modern cyber operations units represent the evolution of traditional Maratha intelligence networks.

The Pratapgad Principle in Modern Context

- Shivaji Maharaj's victory at Pratapgad through terrain selection and intelligence operations parallels modern counter-terrorism operations, including the 2016 surgical strikes.
- Military academies across India teach historical Maratha campaigns as relevant case studies in strategic thinking.
- Indian soldiers along borders continue to apply principles developed by Maratha commanders centuries ago.
- This continuity shows the timeless nature of strategic wisdom based on geography, psychology, and conflict principles.
- This living legacy provides both inspiration and practical knowledge for securing India's future.

WOMEN IN TECH

Women in Tech: Shaping the Future of Innovation

"The future of technology is not just about machines—it's about the people who build them. Women are an essential part of that future."

A Legacy of Pioneers

Since the early days of computing, women have played a vital role in shaping technology. **Ada Lovelace**, considered the world's first computer programmer, wrote the first algorithm for Charles Babbage's Analytical Engine in the 1800s. In the 20th century, Grace Hopper developed one of the first compilers and contributed to the creation of **COBOL**, a foundational programming language.

Women also made significant contributions during World War II, programming early computers like the **ENIAC**. Though their efforts received little recognition then, their work was critical to modern computing.

Modern Innovators

Women continue to lead and innovate across tech domains:

- **Radia Perlman**, known as the "Mother of the Internet," developed the spanning-tree protocol, crucial for network design.
- **Fei-Fei Li** pioneered computer vision and helped create ImageNet, a milestone in AI development.
- **Parisa Tabriz**, Google's "Security Princess," leads efforts in cybersecurity.
- **Reshma Saujani**, founder of Girls Who Code, inspires young girls to pursue tech careers.

These leaders are reshaping the field and paving the way for future generations.

Progress and Support

Change is underway. Organizations like Women Who Code, AnitaB.org, and Black Girls Code are creating mentorship and leadership opportunities. Tech companies and universities are also striving to build more inclusive environments.

Why Diversity Matters

Diverse teams are more creative and better equipped to develop inclusive, user-friendly technologies. When women are involved in design and decision-making, the resulting products are more representative and effective.

Looking Ahead

The tech industry must ensure that all voices are heard. Women are no longer just participants—they are leaders and innovators. With continued encouragement and opportunity, they will drive the future of technology forward.

Falguni Nayar's journey—from the corporate world to becoming one of India's most successful tech entrepreneurs—is a story of reinvention and vision. As founder and **CEO** of **Nykaa**, she built a beauty-tech empire and became a symbol of women's leadership in startups.

Born in Mumbai in 1963 to a business-oriented Gujarati family, Nayar studied commerce at Sydenham College and completed her MBA in Finance from IIM Ahmedabad in 1985. She began her career at Kotak Mahindra in 1993 and swiftly rose through the ranks, eventually becoming Managing Director of Kotak Mahindra Capital and a Director at Kotak Securities.

In 2012, at the age of 50, Nayar took a bold step—leaving a stable, high-profile job to launch Nykaa. Investing \$2 million of her own savings, she built a beauty and lifestyle e-commerce platform when online shopping was still new in India.

Nykaa's edge came from its tech-forward approach. It combined content and commerce, used data for personalization, and adopted a hybrid retail model that earned customer trust. The platform catered to diverse users and uplifted Indian beauty brands alongside global names.

By 2021, Nykaa reached a \$2.3 billion valuation, and its IPO in November listed it at \$13 billion. Overnight, Falguni Nayar became India's wealthiest self-made female billionaire with a net worth of \$6.5 billion.

Even with market changes, her influence remains. As of October 2024, Forbes ranked her 89th among India's 100 Richest, with a net worth of \$3.64 billion. Nykaa remains a family-led business—her daughter, Adwaita, heads Nykaa Fashion, while her son, Anchit, oversees retail and e-commerce.

Nayar's story is more than financial success—it's about determination, bold decision-making, and leading by example. She proved that age is no barrier to entrepreneurship and that women can thrive in tech-led ventures.

Her legacy is a call to aspiring women in tech: believe in your ideas, take the leap, and lead with confidence. Falguni Nayar didn't just build a business—she built a path for others to follow.

Welcome to the alumni journey, where we catch up with our alumni's and dive into the stories that continue to inspire us. Today, we have someone super special with us — Swarda Bhandare. During her time with ACES, she brought a lot of energy, creativity, and dedication to everything she did. She is now pursuing her MS in Management of Technology at Arizona State University. We're also joined by Ajinkya Sahu—an exceptional alumnus, Best Outgoing Student of his batch, and former General Secretary of ACES. Let's dive into their journey and gain insights from their experience.

ALUMNI JOURNEY

College days are often filled with unforgettable experiences. So, my first question to you is: What are some of your favorite memories from your time in college?

The best memories, I would say, are from being a part of ACES. As you know, we didn't get to spend much time in college due to COVID. The only time we were actually on campus was during the final year. So, we made a lot of memories by working with different kinds of people. That was truly special.

It's great to hear from you. Next question: You were the event head during your final year. What motivated you to choose ACES in your final year rather than earlier in your college life? Did you try to participate in other clubs?

I had given it a shot. I did try participating in other clubs. I was also part of VLABS, but only for a short time. I joined ACES in the last year because it was finally offline. I preferred being part of an offline club over an online one. When you're in an offline club, you get to explore people more closely and build real connections. Also, working in groups for events in person is a whole different experience than doing it online. Our staff coordinator, Bhadgale Sir, used to treat us after every event because we worked hard — that's one of the most memorable things for me.

You were the backbone of ACES along with Ajinkya Sahu, the General Secretary at that time. How did you manage the responsibilities, and what challenges did you face during that year?

See, it all comes down to how your GS is. He was the GS at that time, and he was very friendly and communicative, so it was really nice working with him. That's what worked for us and helped us manage everything smoothly. It all depends on how well you communicate with others. So that's the key — communication is essential when it comes to managing work in a team or any working environment.

Balancing academics with other activities isn't easy. So my next question is: You are currently studying at Arizona State University. In your opinion, what's the major difference between the Indian education system and the US system?

First of all, here everything is practical. In India, the syllabus and exam patterns are the same for everyone. But in the US, it depends on the professor. Some professors may choose not to conduct exams and instead focus solely on assignments. Assignments here are a big deal — you do them every week, and that gives you hands-on experience. That's the main difference — the practical knowledge and the continuous learning process.

What resources or strategies did you find most helpful while preparing for your MS application? How did you balance your study schedule during the final year?

Frankly speaking, I used to study just before exams (laughs). But if you manage your time properly, it's not difficult. You just have to decide when to study and when to work on applications. Without a timeline, you can't suddenly wake up one morning and decide to give an exam in two months. You have to plan a daily schedule and stick to it. As for MS preparation, I used many online resources like YouTube and Telegram channels for free material. I joined a class too, but I wouldn't recommend it. Self-study works better for GRE.

From your LinkedIn posts, it seems like you are shifting from core engineering to management. Is that true? Was there a specific moment that led to this decision?

Yes, even before coming here, I had decided to shift to management. I was never into coding, so I knew I didn't want to take a developer role. As ACES event head, I realized I was good at managing and I loved it. So, I chose technical management where I could combine my undergrad technical background with managerial skills.

It's really impressive how you transitioned into management from being an event management head. My question is: How has your engineering background helped you in your master's program?

Since it's a technical management course, my engineering knowledge is still relevant. Engineers think differently — we focus on details and facts. Managers often don't go into such depth. But being detail-oriented really helps, and that's where my engineering background gives me an edge.

From your experience in event management, you played a major role in resolving team conflicts during your final year. How did you manage it, and what do you think are the key aspects to resolving conflicts?

I'd say listen to everyone. Talk politely, understand their perspectives, and communicate clearly. It's all about understanding different viewpoints and motivating people. If you remind them about the success of the event and the bigger picture, they'll want to work together. Keeping things bottled up never helps.

~ SWARDA BHANDARE

College life is often filled with unforgettable moments. What are some of your fondest memories, and how did they shape your journey?

Reflecting on college now feels surreal. Starting as a fresher and now speaking as an alumnus—it's been a remarkable journey. Our batch faced the challenges of the COVID pandemic, with much of our second year impacted by online classes. While it did bring higher grades, we missed out on key experiences. However, I was fortunate to have excellent seniors, supportive juniors, and great peers. Those years, despite the setbacks, remain close to my heart.

You were part of several clubs and student bodies. Which ones stood out, and what did you learn from them?

I was actively involved in multiple clubs. I started with EDC in my first year, but couldn't continue due to COVID. I was a part of V Labs throughout and joined ACES in my second year. I also had the opportunity to be part of the founding team of GDSC at our college. Each experience taught me something unique—leadership, collaboration, and adaptability.

As General Secretary of ACES, which events are you most proud of organizing?

That would be *ALGORYTHM*, our large-scale project competition. Post-COVID, ACES needed a revival, and with the support of our faculty and team, we brought back impactful events. *ALGORYTHM* was a two-day event and a major success. Navigating permissions and planning it was challenging, but the outcome made it worthwhile.

Balancing academics with co-curriculars is never easy. How did you manage to stay consistent?

Time management and smart planning were key. I was never a topper, but I performed well in subjects I enjoyed. I divided my focus strategically—worked with teams, delegated tasks, and made use of tools like AI for learning and project building. Group studies helped manage academics efficiently. It's all about setting realistic, achievable goals and growing gradually, step by step.

You've moved across several cities for education and work. What were the key challenges and takeaways from those transitions?

Stepping out of your comfort zone is essential for growth. Though Indore was my initial preference, my parents encouraged me to study away from home to avoid distractions. That decision shaped my discipline and independence. Every move—Hyderabad, Pune, and now Bangalore—taught me adaptability and resilience.

How has the transition from college to the corporate world been for you?

The corporate environment comes with its own learning curve. Companies guide you through training and onboarding, but adapting to deadlines and work pressure is something you learn over time. The satisfaction of earning and being independent is unmatched. My advice—don't overthink the future. Focus on the present, build good relationships, and find joy in the work you do.

Internships often help shape one's career. Can you share your experience with your internships at Sangraha Innovation and Rhythm Flows?

I found my first internship via Internshala—teaching coding to kids and later shifting to web design. Rhythm Flows came through a senior's reference. Knowing Python and Django helped me secure the backend role. Networking plays a crucial role—reach out to seniors and don't hesitate to apply even if you're still learning. Internships are about growth, not perfection.

You secured one of the highest packages during campus placements. What advice would you give to students preparing for placements?

Start early—preferably in the first or second year. Focus on DSA fundamentals like arrays, linked lists, trees, and graphs. You don't need to master every topic—just strengthen the basics. Build meaningful projects and take part in hackathons. Collaborate with diverse teams—it sharpens both technical and interpersonal skills. Remember, teamwork and consistency matter as much as individual brilliance.

~ AJINKYA SAHU

Prof. Anil Bhadgale

PROFESSOR'S TALK

Good afternoon, sir. I am Vaishnavi Choudhari, accompanied by Ishita Deshpande. We are fortunate to have one of the most experienced teachers from PVGCOET, Professor Anil Bhadgale Sir. He has agreed to share his story and valuable advice. We are glad and very excited to hear from you.

How did your engineering journey begin, and what led you to teaching?

From the 5th standard, I was good at mathematics and always aspired to become an engineer. Initially inclined toward mechanical engineering, I switched to computer engineering due to the booming IT sector. I pursued my degree at Pravara Rural Engineering College — the same place where I completed my 10th to 12th, so it felt like home. Despite not having used a computer until then, I adapted quickly, thanks to inspirational teachers who made me fall in love with programming, especially the one who taught me Data Structures and Software Engineering. I even earned top marks in Discrete Mathematics, which was quite difficult at that time.

Beyond academics, I was active in sports. I was awarded Best Bowler and helped my department win the inter-department cricket championship in my third year. Those moments, along with a memorable farewell from juniors, still stay with me. I visited my college with my daughter. I showed her the department and met the particular teacher. So I request all of you, even in the future, you need to have a connection with the department because at the end, it's your department.

Post-graduation, I pursued an ME, but in hindsight, it might not have been the best decision. However, it led me to teaching — a field where I found great joy in interacting with students. I believe in transparency and building trust with them and always encouraging open dialogue. In the end, I have a right to praise and scold them.

What changes have you observed in students and the department over time?

Since I began teaching in 2008, I've seen consistent academic excellence from students. Though recent batches show slightly less enthusiasm for programming, the results are still impressive. The quality of students hasn't declined — it's just that the effort and passion seem to have dipped. Anyways, as I said, the students are excellent ones. And yes, I think that I can teach to the excellent students because when you are prepared, you need not to worry about the students.

Your bond with students seems strong. What has strengthened it?

Students respect teachers who guide them honestly and supportively. Respect cannot be created; it comes when you connect with students genuinely and offer meaningful mentorship. It has to be from the heart of the student. And yes, it is possible if you are going to teach them, if you are going to guide them without having any hesitation. Treat them like a friend. Treat them like a family member.

Has a student ever left a lasting impression on you?

Yes, especially the 2020–2023 “Corona batch.” Despite limited interaction due to online learning, they excelled across academics, sports, and placements. They proved that students can thrive even without constant guidance — a reminder to appreciate their efforts beyond attendance. They were truly all-rounders. I believe we should aim to cultivate that kind of well-rounded potential in students, rather than focusing solely on academics. Even if they miss lectures or practicals, if they're out there participating in technical or non-technical events and winning, that effort deserves recognition.

You've received many heartfelt alumni letters. Any story behind them?

One memorable instance was with the 2019–20 batch when I was the ACES coordinator. I supported their initiatives, and perhaps that's why they appreciated me so much. Unfortunately, due to COVID, I couldn't give them the farewell they deserved — something I still regret deeply.

What are your interests outside teaching?

I love sports and movies — especially cricket, volleyball, and anything starring Aamir Khan or Madhuri Dixit. Never missed an Aamir Khan movie. I used to play at the district level in some sports and still participate in volleyball during college events.

What drives you to balance teaching and co-curricular activities?

When I graduated, I lacked confidence and communication skills. I don't want today's students to face the same challenge. I always tell them — your SGPA isn't going to talk for you — it's just a step to enter a company or a campus. But after that, your communication skills and technical knowledge matter most. That's why I promote participation in every activity. This is the right place and time to receive realistic, constructive feedback. A company might just reject you, but here, we'll guide you. Improvement only happens when you step up, participate, and represent yourself. Winning is secondary — it's about learning and improving. No one is perfect, but effort and visibility matter. So step up, participate, and grow.

As a teacher known for your project-based learning (PBL) approach, do you think universities focus too much on exams, making learning dull for students? And how do you promote innovative learning?

Universities have rules, but don't be limited by them. Marks are just records — skills matter more. PVG students should innovate, not just follow standard assignments. In labs like CG and DS, build meaningful projects; use PBL work for your final year. One PVG student got a 16 LPA offer in his third year by working on GCC — without a degree. Skills, not degrees, drive success. Syllabi change every 4 years; tech changes yearly. Adaptability matters more than the university you're under. Universities can't customize education — students must differentiate themselves. Take initiative, suggest changes, and your efforts will be recognized.

How do you stay updated with the rapidly changing technology, and what advice would you give students?

For undergraduate students, I always say — Don't chase trends. Focus on concepts. If you're good in C/C++, picking up Java or Python is easy. Tools change — fundamentals don't. Personally, I avoid ChatGPT. If something goes wrong, it's your mistake — not the AI's. If it goes well, then ChatGPT gets the credit, not you. Why? If you succeed, you should get the credit. Use help, but understand deeply and apply creativity. So my advice: don't rely on smart tools for learning. Save them for when you're working on real projects — when your career depends on them. During your education, stick to the basics. Build your foundation there.

Tell us about your Ph.D. and how you balance it with teaching.

I'm pursuing a Ph.D. in Natural Language Processing (NLP) from Sathyabama University, focused on regional Indian languages. I chose NLP because it's both current and personally interesting. If I'm not wrong, during one of the theory papers at the Sathyabama Research Centre for NLP, scored 96 out of 100 — the highest marks in that subject. I had done everything on my own, and it was a proud moment. That's what I always tell students: if a topic truly interests you, you'll naturally perform well in it. The same applies to projects — if it's your own choice, your area of interest, then why wouldn't you give it your 100%?

As for managing both teaching and research, I follow a strict timetable. When I'm at college, I focus entirely on college work.

Once I leave college, I disconnect from those duties. You have to clearly identify your boundaries — when to start, and when to stop.

Of course, it's not always perfect, and things can go wrong. But if you build a habit, it becomes manageable.

You've been deeply involved in ACES. What's your take on its evolution?

ACES is a great platform, and students here are capable organizers. The only issue we continue to face is participation. We invest time and money in expert sessions, but turnout is low — often students from other departments attend more than our own. From 2024–25, all computer engineering students are members of ACES, which is a positive step. I suggest making attendance compulsory for relevant sessions. These are student-funded events — they should benefit fully from them. If it's for their own benefit, we should help them realize that, and ensure they're present. The events are excellent, but the right audience must be there. Participation matters.

What do you look forward to most every year? What's your advice for future engineers?

Honestly, I want our Computer Department to win the championship — we haven't in 16 years. We often say our students aren't strong in sports — but that's not entirely true. We have participation, even from girls, and equal enthusiasm across students. The only thing missing is the 100% effort. But as engineers, PVG students are born to be great engineers. 101 percent. Our placement stats, our salary packages, our alumni success — all of it proves that PVG students make a mark. But there's one thing I would like to emphasize: after graduation, don't disconnect from college. This is your college, not just ours as teachers. Alumni need to maintain that bond. It's disappointing when only a few attend alumni meets. Affinity can't be forced — it has to come from within.

And one piece of advice you received for your career?

Frankly speaking, I never had direct career guidance, but one speaker once said: "Whenever you say it's your decision, you need to prove that it was the right one. Never call it a compromise." Even if I made mistakes, I owned them. One decision I regret was joining PG without guidance — but I still gave it my 100%. Whatever you choose — M.S., job, or staying local — own your choice and move forward.

Any memorable teaching moments?

The 2015–16 batch stands out. Even after a decade, I remember their connection with me. It wasn't about grades — it was about bond and respect. I still have handwritten letters from them. Students notice everything — they don't give respect blindly. They respect genuine effort. I genuinely wish that every batch could build that kind of connection. Because years from now, no one is going to remember your marks or your CGPA — but the way you connected with us, your teachers, will always be remembered.

To conclude, thank you so much, sir. It was wonderful getting to know more about you, hearing about your journey, your experiences, and your growth.

Thank you for inviting me for this interview. I hope you enjoyed it.

HACKER CUP

TECH COMPETITIONS

1. Smart India Hackathon (SIH)
(Govt.-backed, internships/jobs,
national prestige)

2. Google Summer of Code
(GSoC)
(Stipend + Google mentorship,
open-source legend)

3. Microsoft Imagine Cup
(Global stage, funding for
startups, Microsoft internships)

4. IndiaHacks by HackerEarth
(Laptops, job referrals,
Zomato/Swiggy recruitment)

5. TCS CodeVita
(TCS internships, global coding
fame)

6. HackWithInfy
(Direct Infosys jobs, coding
stardom)

7. Amazon ML Challenge
(Machine learning glory,
Amazon internships)

8. IBM Call for Code
(Social impact + \$200K funding,
IBM mentorship)

9. Flipkart GRiD
(PPOs at Flipkart, real-world
tech challenges)

10. Google Kick Start & Code
Jam
(Interview calls at Google,
global coding leaderboard)

11. HackerRank India
Challenges: Coding contests
hosted by Goldman Sachs and
other MNCs.
10. Open Source Summit India :
Platform for contributing to
open-source projects (Linux,
Apache).

12. Call for Code Global
Challenge (by IBM)
A worldwide tech competition
that invites developers and
problem solvers to create
sustainable open-source
solutions for disaster response,
climate change, and
humanitarian issues.

13. Facebook (Meta) Hacker
Cup
A global coding competition
hosted by Meta, where
participants solve algorithmic
problems under time pressure
— great for competitive
programmers.

SHORT PASSAGE

Green AI & Sustainable Computing: Powering the Future Responsibly

AI is revolutionizing industries—from personalized recommendations to autonomous vehicles and scientific research. But its remarkable capabilities come with a cost: significant energy consumption and a growing carbon footprint. Training complex models and operating vast data centers demand substantial resources, raising urgent sustainability concerns.

Green AI and sustainable computing aim to address these challenges by making AI more energy-efficient at every stage. Techniques like model pruning and quantization help reduce computational demands, while efficient AI architectures are designed to achieve high performance with fewer resources. Sustainable computing also involves hardware and infrastructure. Specialized processors like GPUs and TPUs, built for low-power performance, play a key role. Innovations like neuromorphic computing—inspired by the brain's efficiency—offer promising alternatives. Optimizing data centers through better cooling, power management, and renewable energy integration further reduces environmental impact.

Another vital strategy is edge computing—processing data locally on devices such as smartphones or IoT sensors. This minimizes data transfer to central servers, reducing energy use and latency. For example, a smart city can analyze traffic patterns on-site to improve flow and cut emissions.

Tech giants like Google, Microsoft, and Meta are embracing these principles, signaling a shift toward more responsible AI development. The path is challenging, but essential. As AI continues to grow, so must our commitment to environmental responsibility.

By embedding sustainability into AI design, infrastructure, and deployment, we can align innovation with ecological stewardship—paving the way for a greener future.

Testimonials by Seniors

TECHNICAL JOINT HEAD AY 2023-24

ADITYA DESHMUKH

I'm excited to share my journey as a final-year Computer Engineering student at PVG COET, Pune. These four years have been unforgettable. The ACES club played a big role in shaping my skills and college life. I encourage juniors to actively join events and projects — they create lasting memories.

Though our first semester was online due to the pandemic, we stayed connected and made the most of it. My advice: grab every opportunity, from coding contests to cultural events.

Focus on coding from the third year and take ownership of your growth beyond college resources. Also, build strong connections with peers, seniors, and industry professionals — they'll be invaluable.

I'm grateful for my time at PVG COET and wish my juniors the very best!

SRUSHTI SHIRHATTI

EDITORIAL HEAD AY 2022-23

Being a part of ACES was genuinely one of the highlights of my college journey. From managing events and hackathons to making memories with some of the most passionate and creative minds, it was an experience that helped me grow both personally and professionally.

To the juniors—don't hesitate to take initiative, ask questions, and most importantly, enjoy the ride! These years are more formative than you realize, so make the most of every opportunity. Make new friends, say yes to experiences, and soak in every bit of college life—because trust me, this unique mix of fun, learning, and masti won't come back! So have fun, but also keep track of what you're learning along the way.

DESIGN HEAD AY 2023-24

PRADNYA DENGALE

Looking back at my engineering journey, ACES was one of the most defining parts. I joined the Design and Production team in my second year, not knowing it would shape so much of my college life. From team member to team lead, every step brought challenges, creativity, and growth.

Engineering can get overwhelming with deadlines and pressure, but ACES gave me a space to explore, create, and connect. Whether it was last-minute design changes or late-night brainstorming, it was all worth it because of the people and the passion.

To juniors — say yes to opportunities. Take part, lead, learn, and enjoy the ride. These moments truly make your engineering years unforgettable.

Testimonials by Seniors

EDITORIAL JOINT HEAD AY 2023-24

PANKAJ MORE

I pursued BE Computer Engineering (Hons. AI & ML) at PVG's COET from 2020–2024. The Computer Engineering department's support and a motivating environment helped me explore, innovate, and push my limits. Inspired by my seniors, I joined ACES as Joint Head of the Editorial team (2023–24). Leading ACE THE TECH magazine, launching The ACES Pulse newsletter, and organizing events like Mind Booth sharpened my leadership, teamwork, and creativity.

ACES not only helped me grow professionally but also gave me lifelong memories through outings, seminars, and activities that built strong friendships. To the juniors: ACES is a platform to learn, lead, and leave your mark — make the most of it!

SWARAJ MHATRE

WEB HEAD AY 2023-24

Joining ACES was one of the best decisions I made in college. Starting as a Design & Production team member in my second year, I gained not just communication and teamwork skills, but also strong bonds with seniors and the confidence to handle pressure. Leading the DNP team in my third year was a major turning point, teaching me accountability. Designing the magazine under tight deadlines — including an unforgettable all-nighter — showed me the power of teamwork.

In my final year, as Web Head, I transitioned the website from basic HTML/JS to React, aligning with my technical interests and strengthening my skills, which helped greatly during placements.

Taking seminars for juniors boosted my public speaking and self-belief. My message: keep working hard, keep building skills — and life becomes easier.

PRATAP KADAM

TECHNICAL HEAD AY 2023-24

ACES has been an incredible part of my college life. Still remember the FOMO of not joining in 2nd year. Which I completely compensated by joining ACES in my 3rd year.

I joined ACES to develop my public speaking skills and to contribute through my excellence. As a part of the web team, we developed the ACES website from scratch. And later, leading the technical team was a whole another experience. I did not just improve my communication skills, but my technical knowledge went from 'Farsh se Arsh Tak' 😊. Being around these tech geeks had a significant impact on my interview preparation.

The knowledge we gained from our seniors, tried to pass it on to the newer, fresh minds. If I had to leave behind a message it would definitely be: "Life doesn't become easy on its own, you have to make it easy for yourself" 🙌

MEME SECTION

I don't know who needs to hear this, but throw away the box your phone came in.

You don't need it. You will never need it.

when the coding problem so hard you turn off your music and sit there like this:

Me: *restarts computer because it's lagging*
Windows Update:
